TREE - EXAMPLE

- Organizational Hierarchy (McGill)

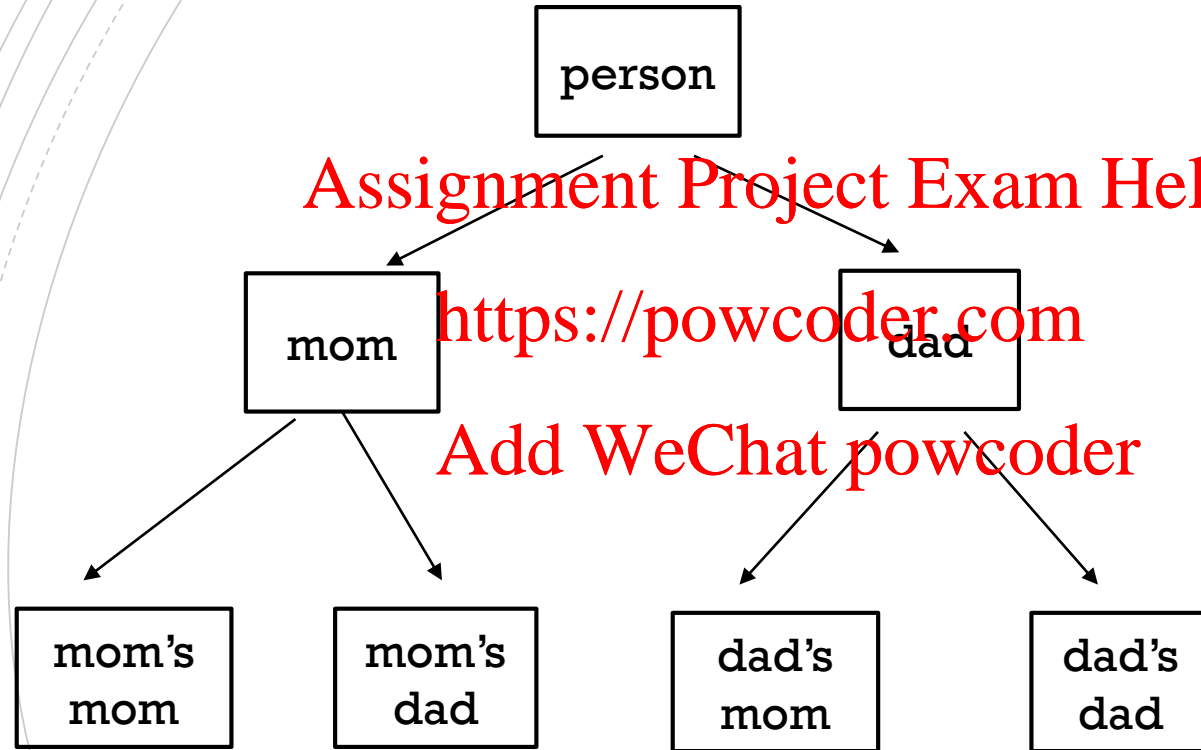

EXAMPLE 2: FAMILY TREE (DESCENDANTS)

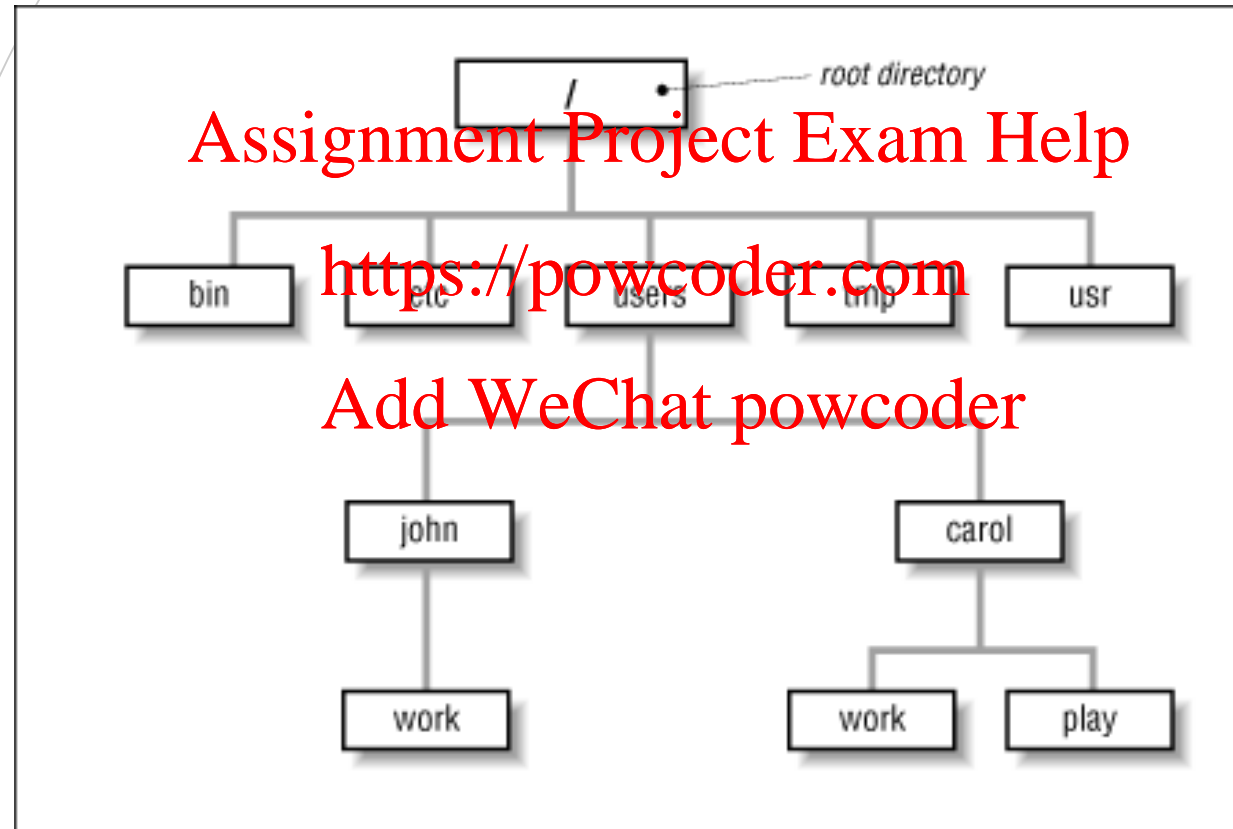

Here we ignore spouses (partner).

EXAMPLE 3: FAMILY TREE (ANCESTORS)

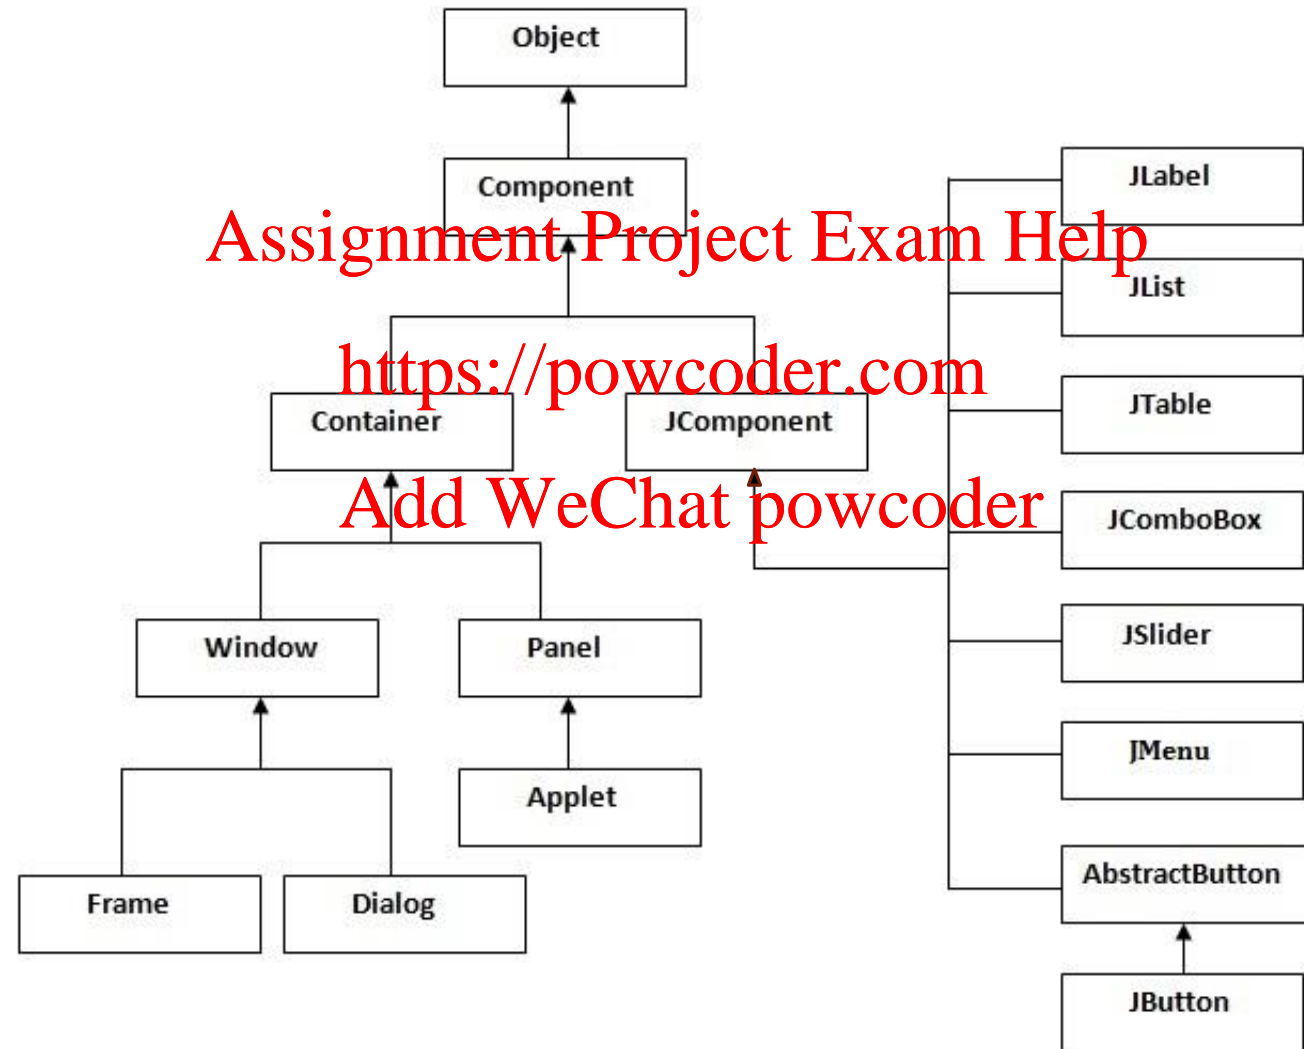

This is an example of a binary tree.

EXAMPLE 4: UNIX FILE SYSTEM

EXAMPLE 5: JAVA CLASSES E.G. GUI

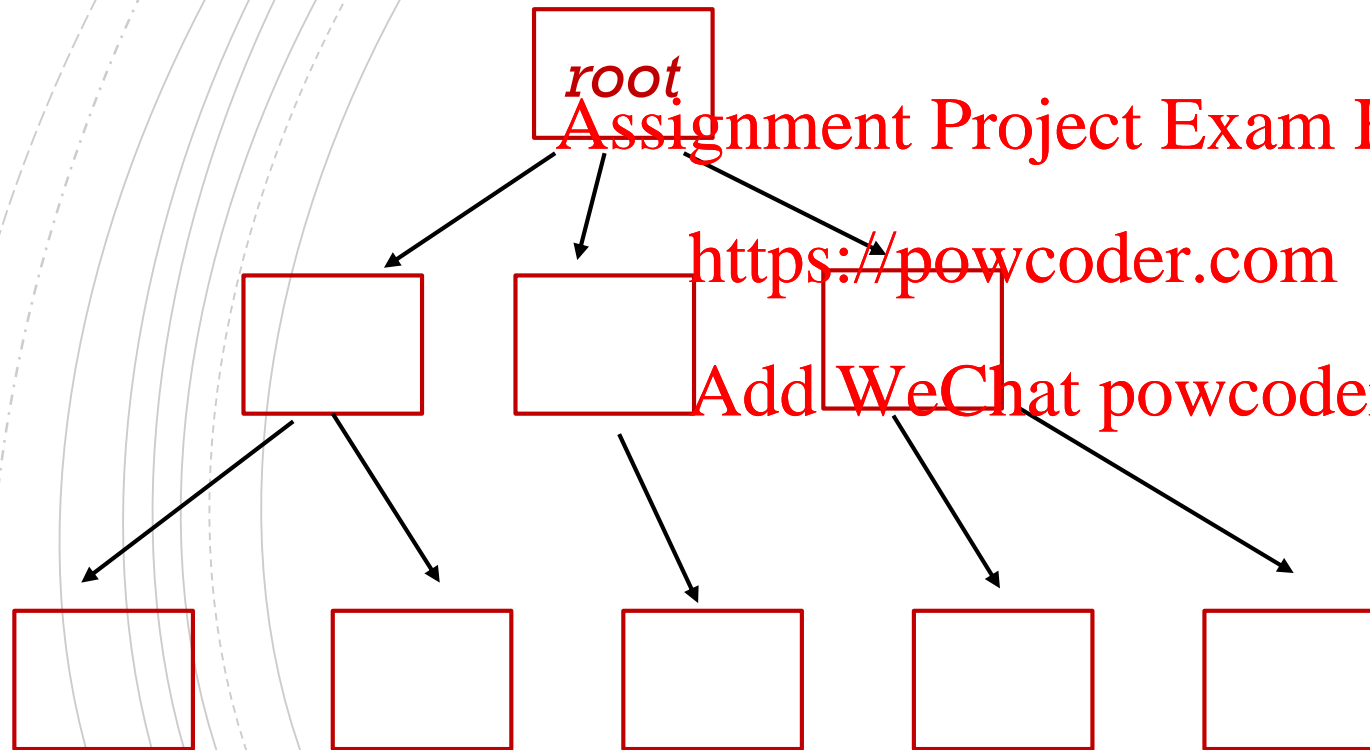

Assignment Project Exam Help

DEFINITIONS
<https://powcoder.com>

Add WeChat powcoder

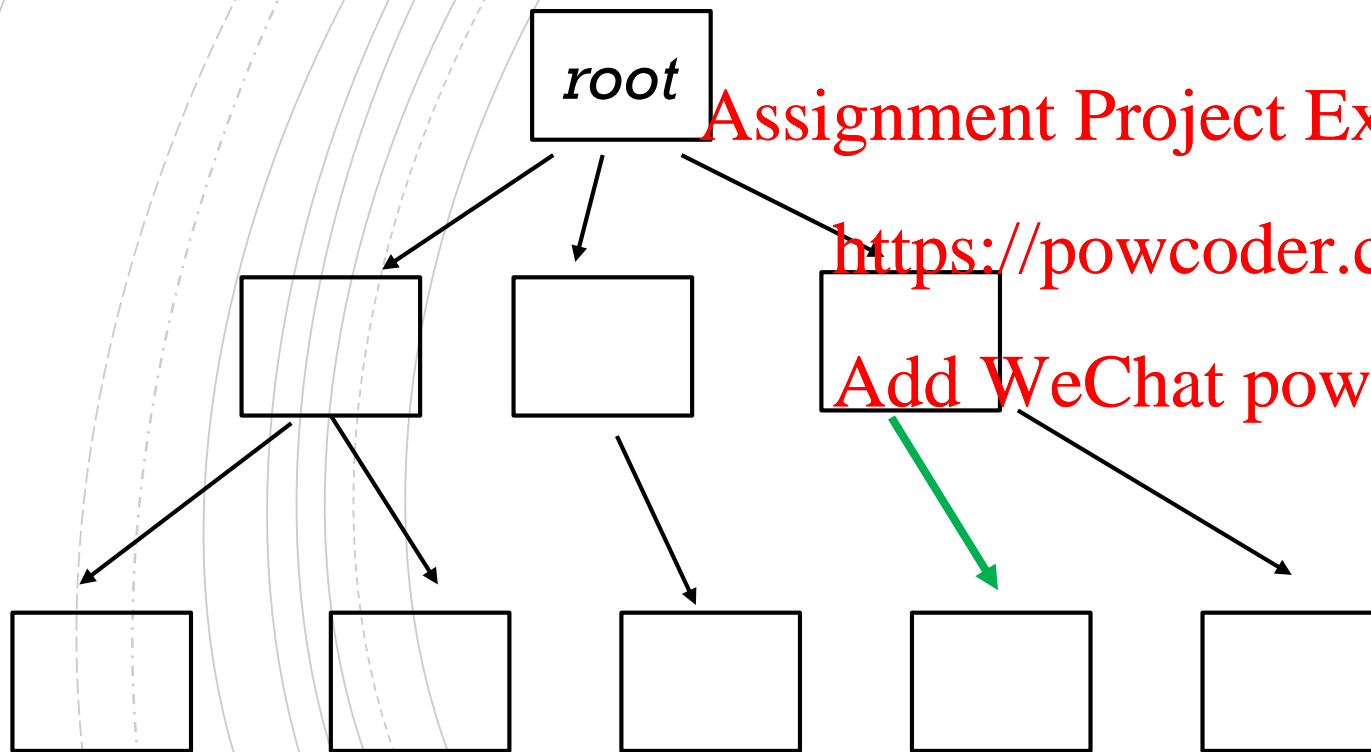

(ROOTED) TREE TERMINOLOGY

A tree is a collection of **nodes** (*vertexes*)

The **root** is the top node in a tree

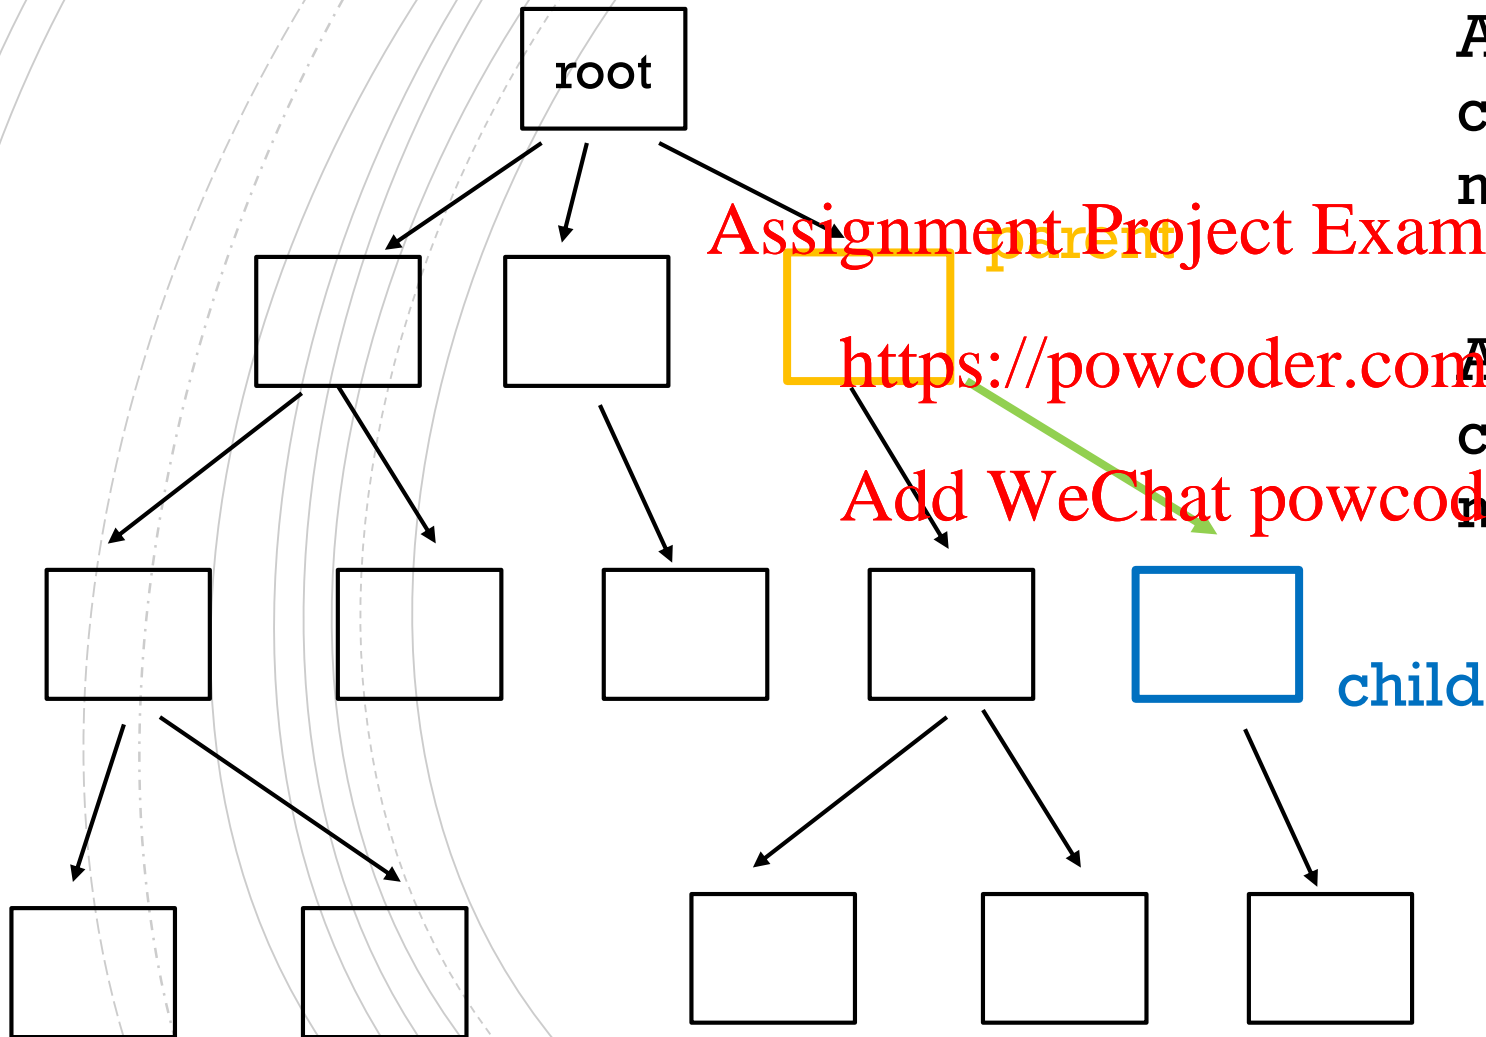

(ROOTED) TREE TERMINOLOGY

A **directed edge** is ordered pair of nodes (v_i, v_j) (from, to).

Trees can be *undirected* or *directed*. If directed, the edges are either all pointing away from the root or all pointing towards the root.

(ROOTED) TREE TERMINOLOGY

A *child* is a node directly connected to another node when moving away from the root.

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

A *parent* is a node directly connected to another node when moving towards the root.

Every node except the root is a *child*, and has exactly one *parent*.

EDGE DIRECTION

For some trees,

- edges are directed from parent to child
- edges are directed from child to parent
- edges are directed both from parent to child and child to parent.
- edge direction is ignored e.g. common with non-rooted trees (see next slide)

Most of definitions today will assume edges are from parent to child.

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

ASIDE: NON-ROOTED TREES

You will see non-rooted trees most commonly when edges are undirected, and there is no natural way to define the 'root'.

You will see examples in COMP 251.

e.g. the tree on the left is only rooted because I drew it that way. It is actually the same (non-rooted) tree as the one on the right.

Add WeChat powcoder

NUMBER OF EDGES

- Q: If a (rooted) tree has n nodes, then how many edges does it have?

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

NUMBER OF EDGES

- Q: If a (rooted) tree has n nodes, then how many edges does it have?

Assignment Project Exam Help

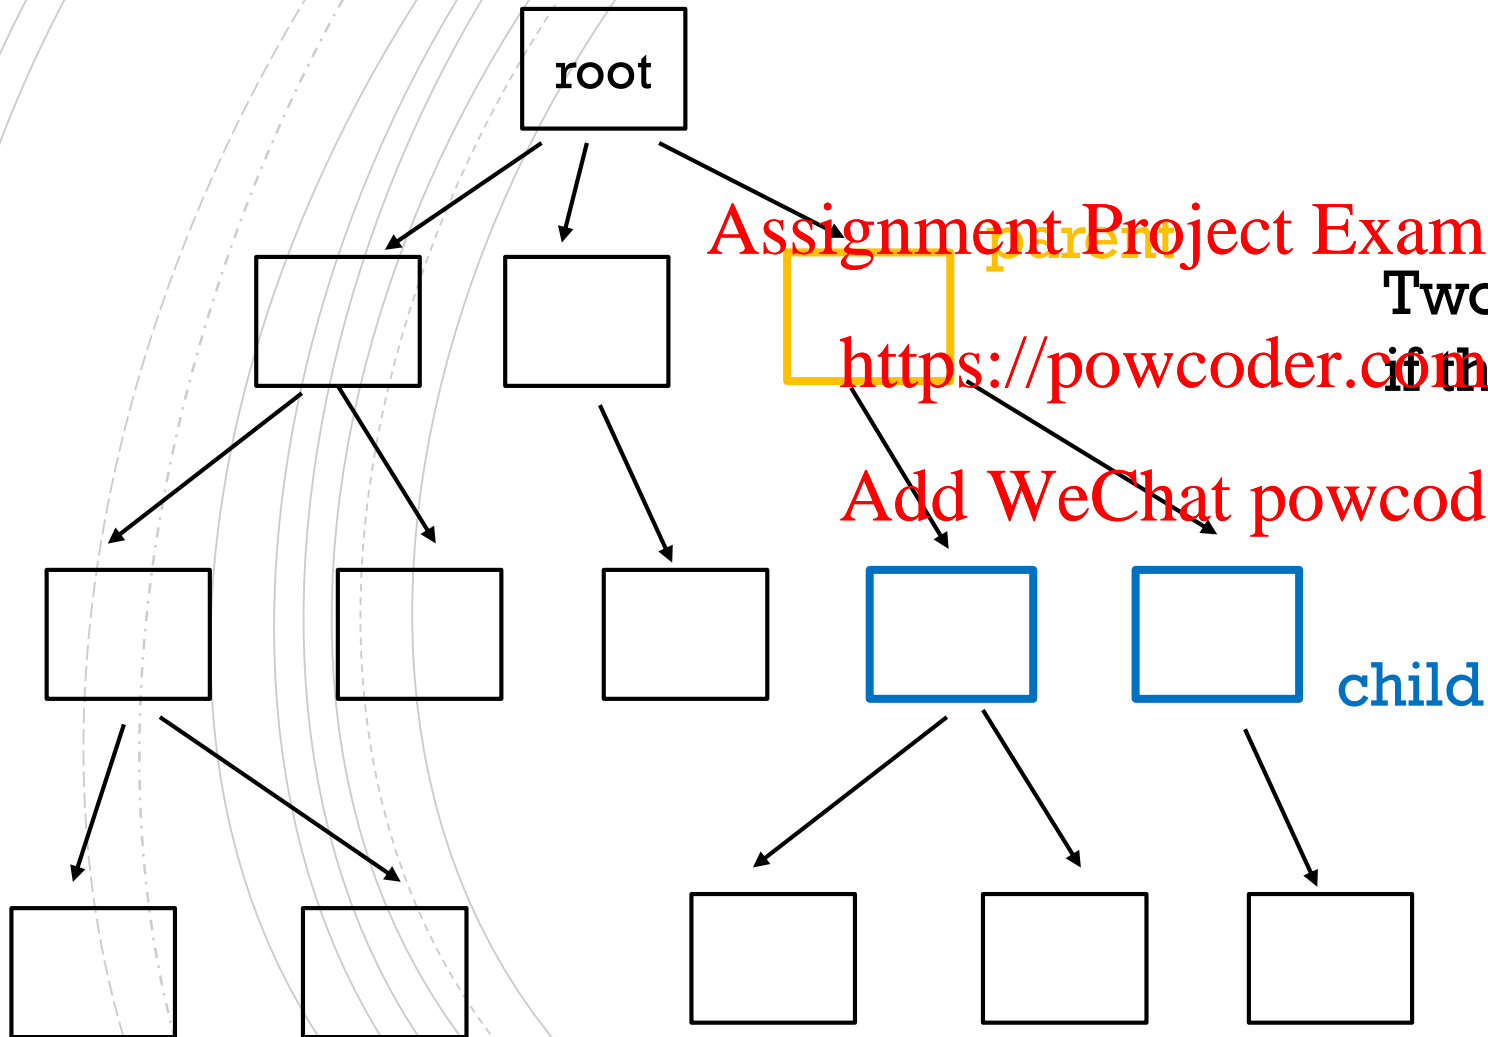

- A: $n - 1$

<https://powcoder.com>

Add WeChat powcoder

Since every edge is of the form (parent, child), and each node except the root is a child and each child has exactly one parent.

(ROOTED) TREE TERMINOLOGY

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

Two nodes are said to be **siblings** if they have the same **parent**.

child

RECURSIVE DEFINITION OF ROOTED TREE

A tree T is a finite (& possibly empty) set of n nodes such that:

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

?

RECURSIVE DEFINITION OF ROOTED TREE

A tree T is a finite (& possibly empty) set of n nodes such that:

- if $n > 0$ then one of the nodes is the root

?

RECURSIVE DEFINITION OF ROOTED TREE

A tree T is a finite (& possibly empty) set of n nodes such that:

- if $n > 0$ then one of the nodes is the root
- if $n > 1$ then the $n - 1$ non-root nodes are partitioned into (non-empty) subsets T_1, T_2, \dots, T_k , each of which is a tree (called a “subtree”), and the roots of the subtrees are the children of root r .

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

ANOTHER DEFINITION

A recursive definition for tree can also be given using lists as follows:

Assignment Project Exam Help
<https://powcoder.com>
Add WeChat powcoder

```
tree      =    root | ( root listOfSubTrees )  
listOfSubTrees = tree | tree listOfSubTrees
```

Note that `listOfSubTrees` cannot be empty.

TRY IT!

A recursive definition for tree can also be given using lists as follows:

Assignment Project Exam Help
<https://powcoder.com>
Add WeChat powcoder

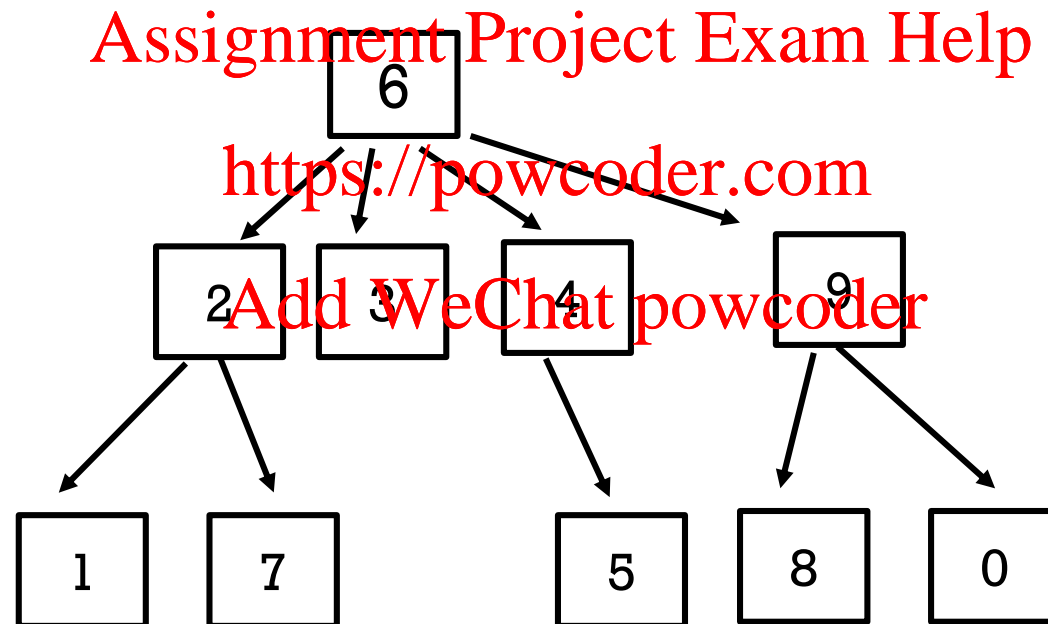

```
tree      =      root      |      ( root listOfSubTrees )  
listOfSubTrees = tree | tree listOfSubTrees
```

- Draw the tree that corresponds to the following list, where the root elements are single digits.

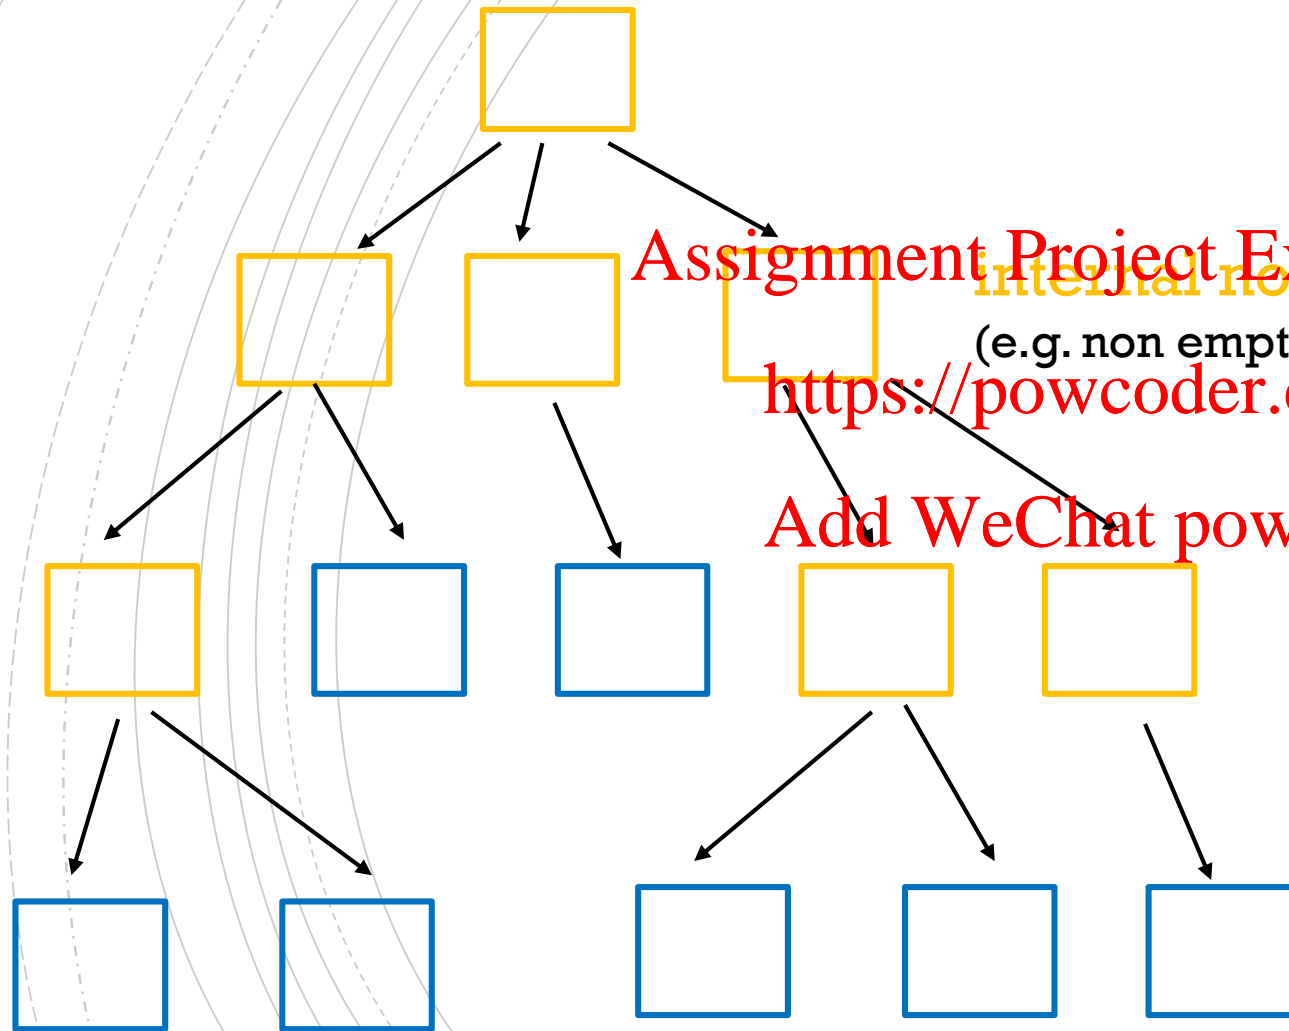

(6 (2 1 7) 3 (4 5) (9 8 0))

SOLUTION

$(6 \ (2 \ 1 \ 7) \ 3 \ (4 \ 5) \ (9 \ 8 \ 0))$ represents the following tree:

(ROOTED) TREE TERMINOLOGY

An *internal node* is a node with at least one child.

Assignment Project Exam Help

Internal nodes

(e.g. non empty file directories)

<https://powcoder.com>

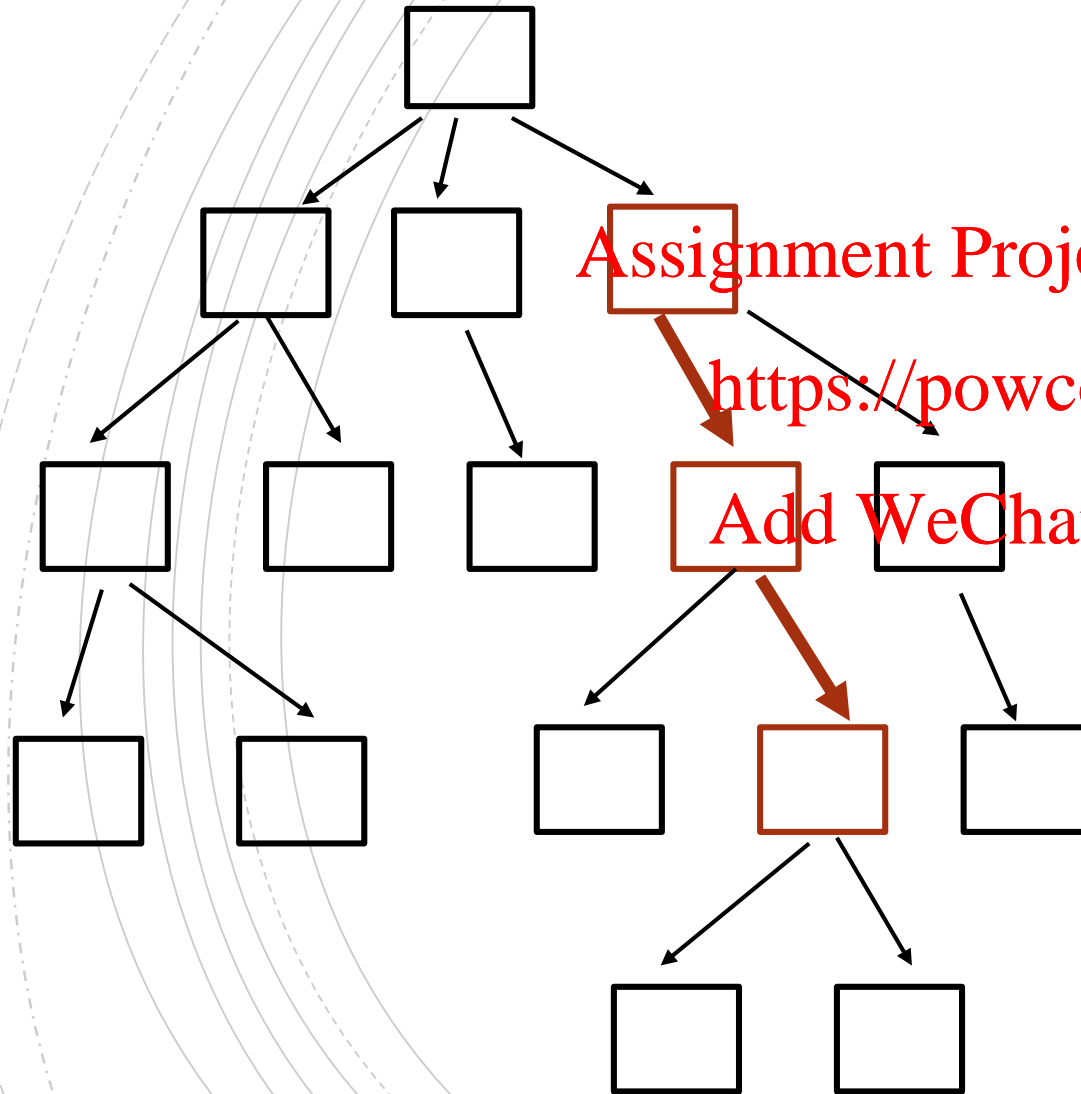

Add WeChat powcoder

An *leaf (or external node)* is a node with no children.

leaves (external nodes)

(e.g. files or empty directories)

TREE TERMINOLOGY

A *path* in a tree is a sequence of nodes (v_1, v_2, \dots, v_k) such that (v_i, v_{i+1}) is an edge.

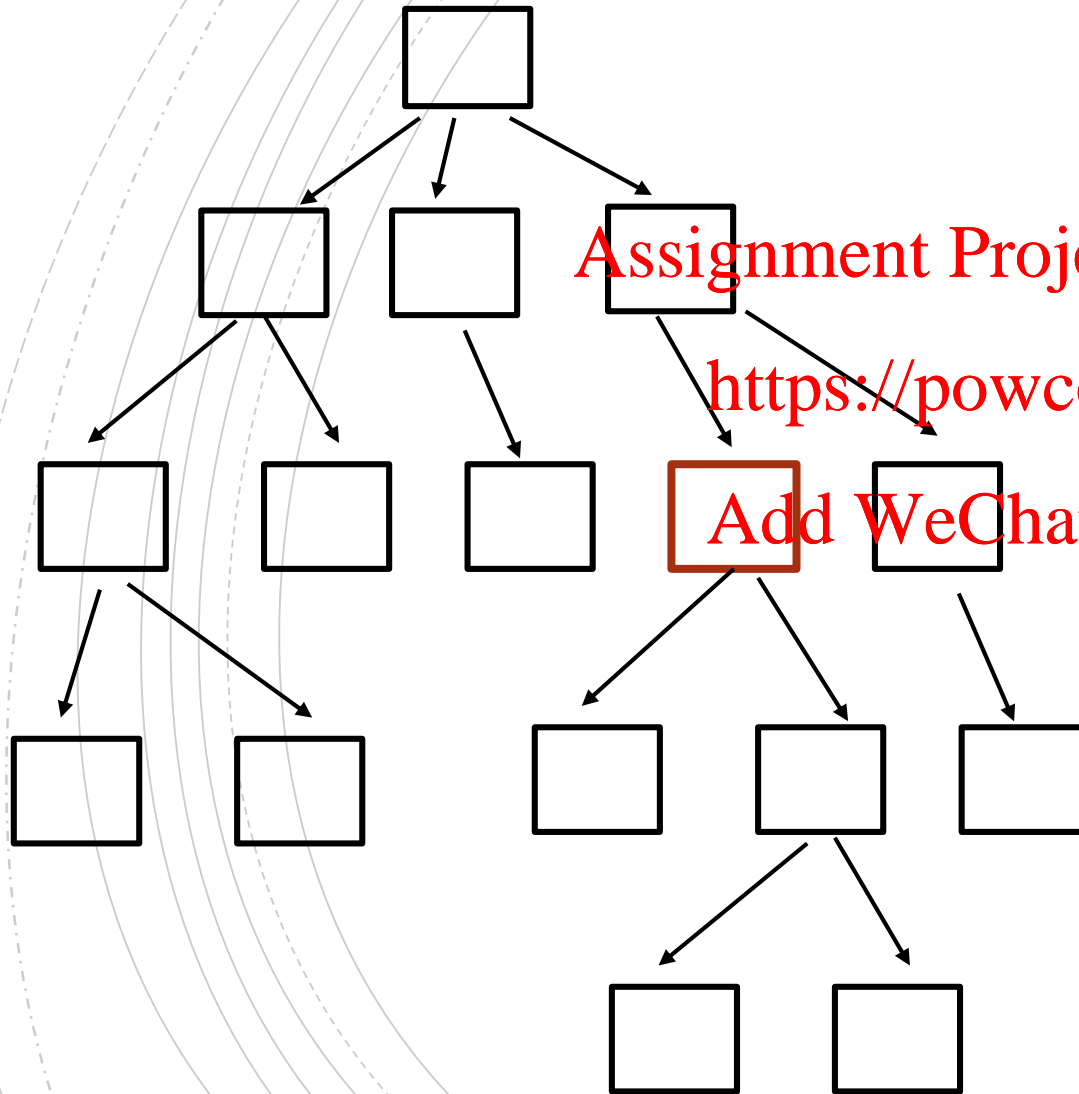

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

The *length* of a path is the number of edges in the path (number of nodes in the path – 1)

TREE TERMINOLOGY

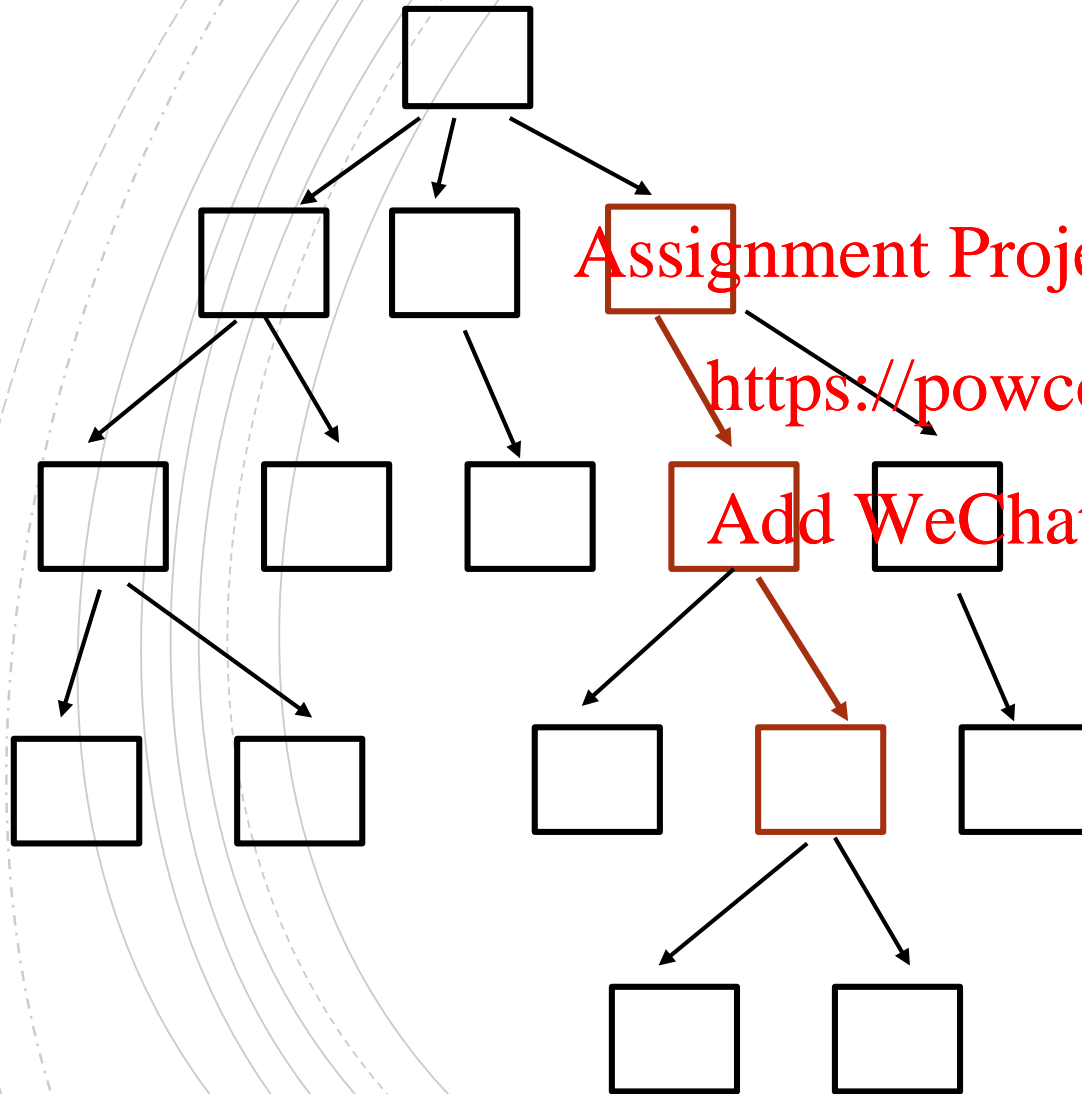

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

A path with just one node (v_1) has length = 0, since it has no edges.

QUICK QUESTION

Assignment Project Exam Help

~~<https://powcoder.com>~~

Add WeChat powcoder

What is the path length?

TREE TERMINOLOGY

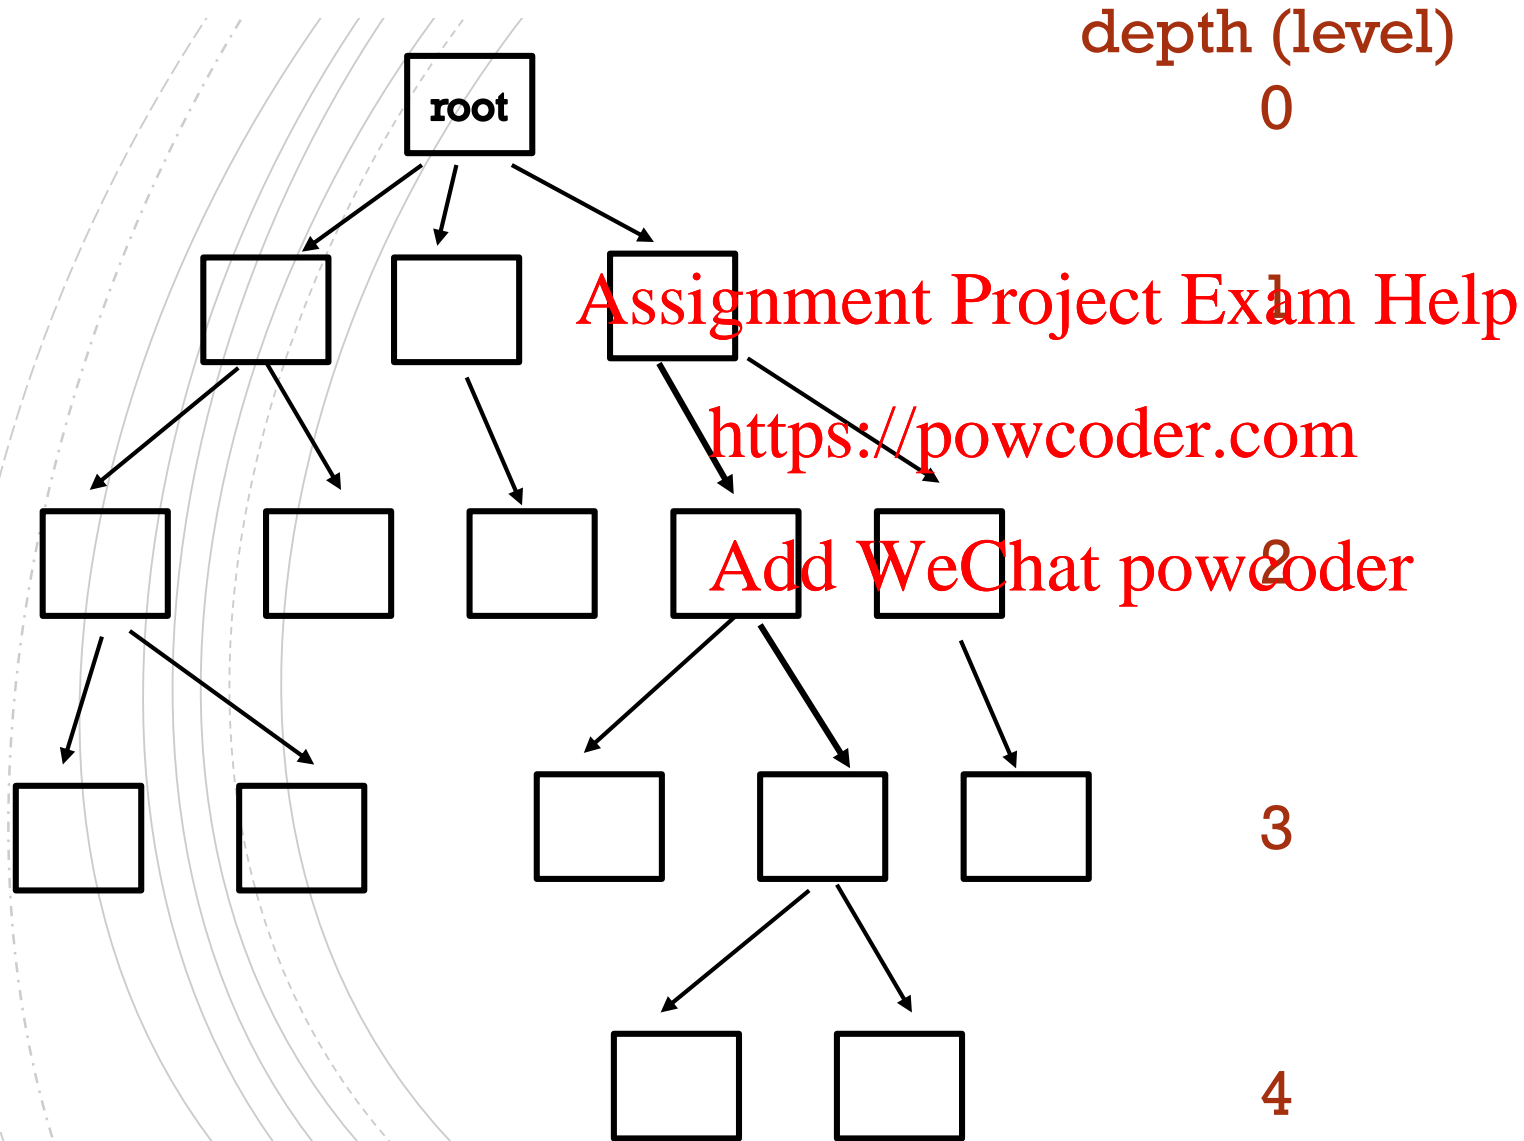

Assignment Project Exam Help

~~<https://powcoder.com>~~

Add WeChat powcoder

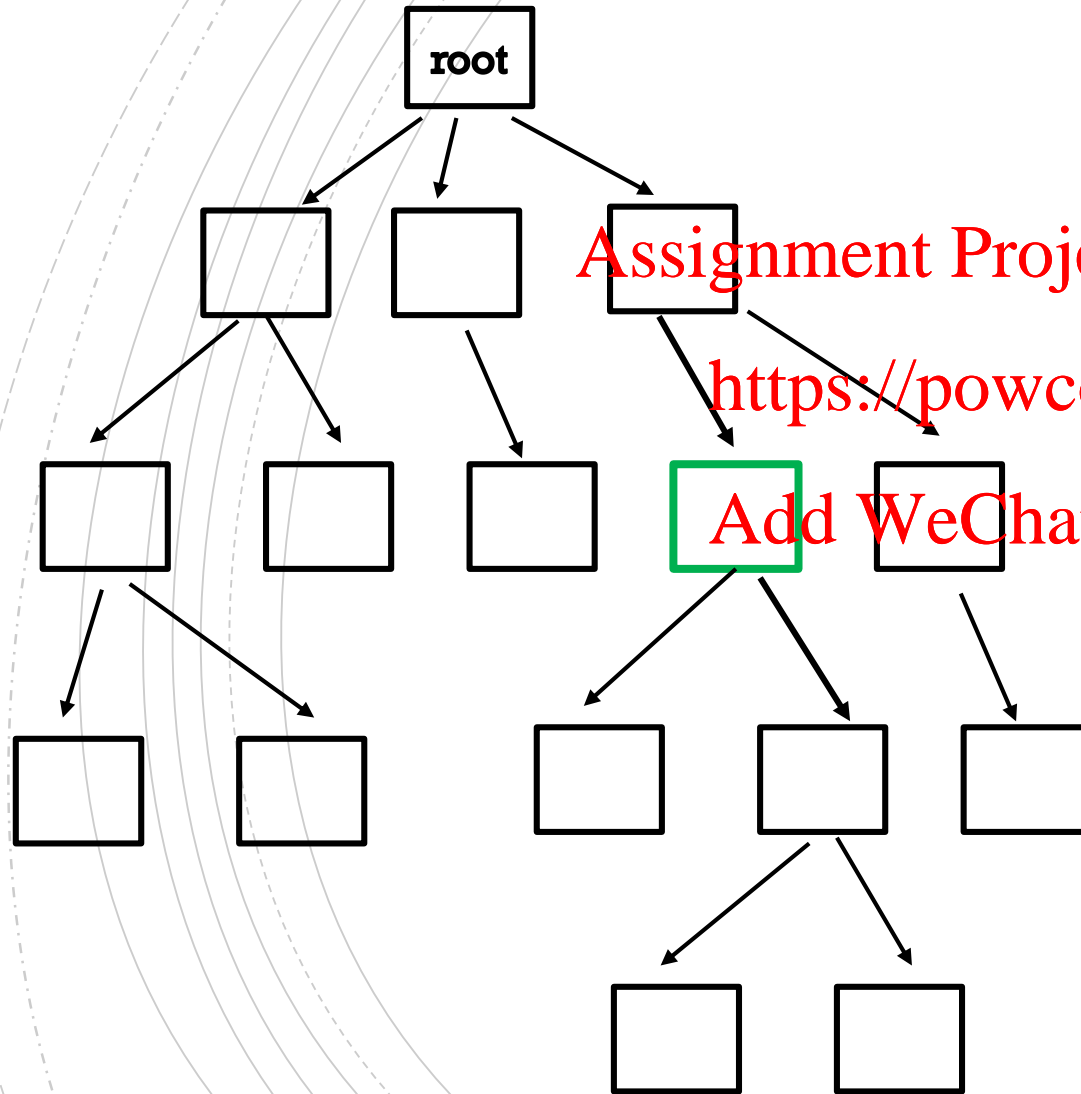

Node v is an *ancestor* of node w if there is a path from v to w .
In such case, we also say that w is a *descendent* of node v .

(ROOTED) TREE TERMINOLOGY

The *depth* (or *level*) of a node is the length of the path *from the root to the node*.

(ROOTED) TREE TERMINOLOGY

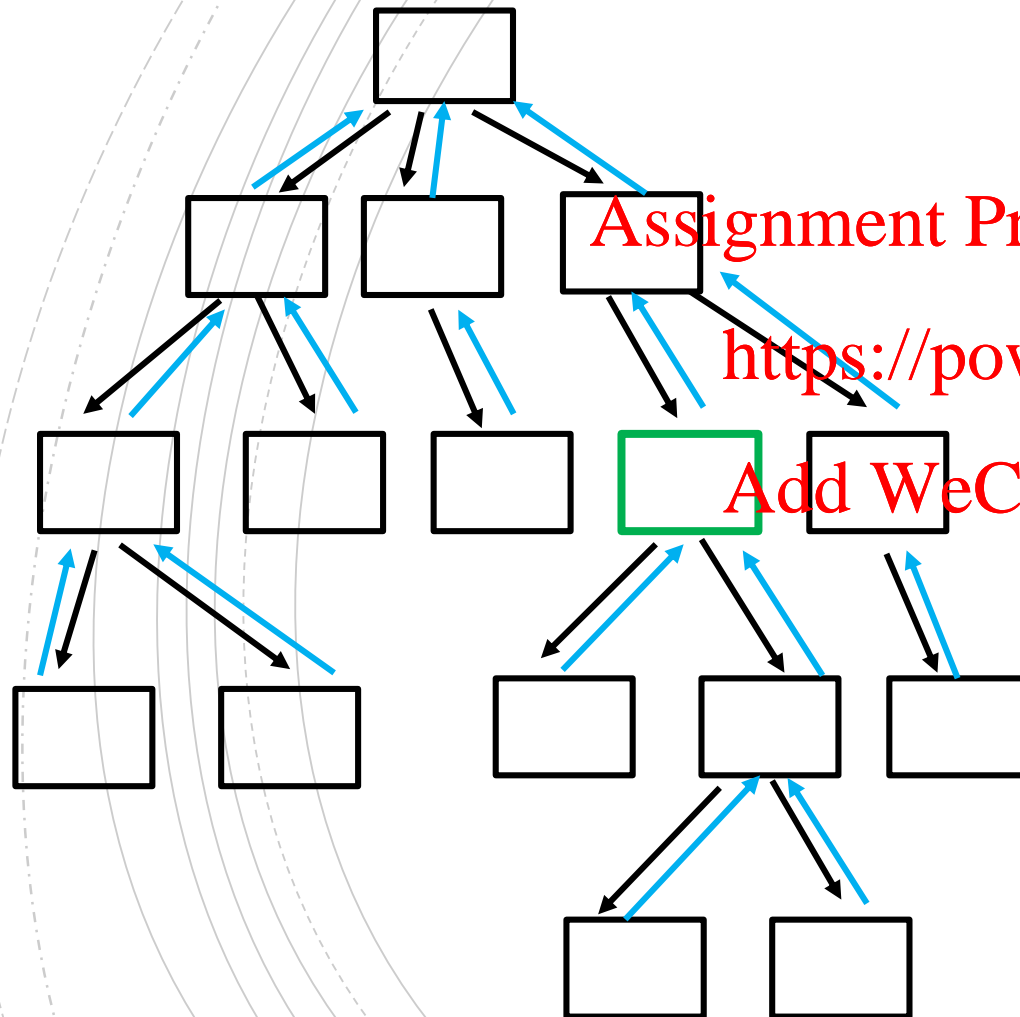

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

How can we compute the depth of a node v ?

depth(v)

To do this efficiently we require nodes to have a **parent link**. This is analogous to a 'prev' link in a doubly linked list.

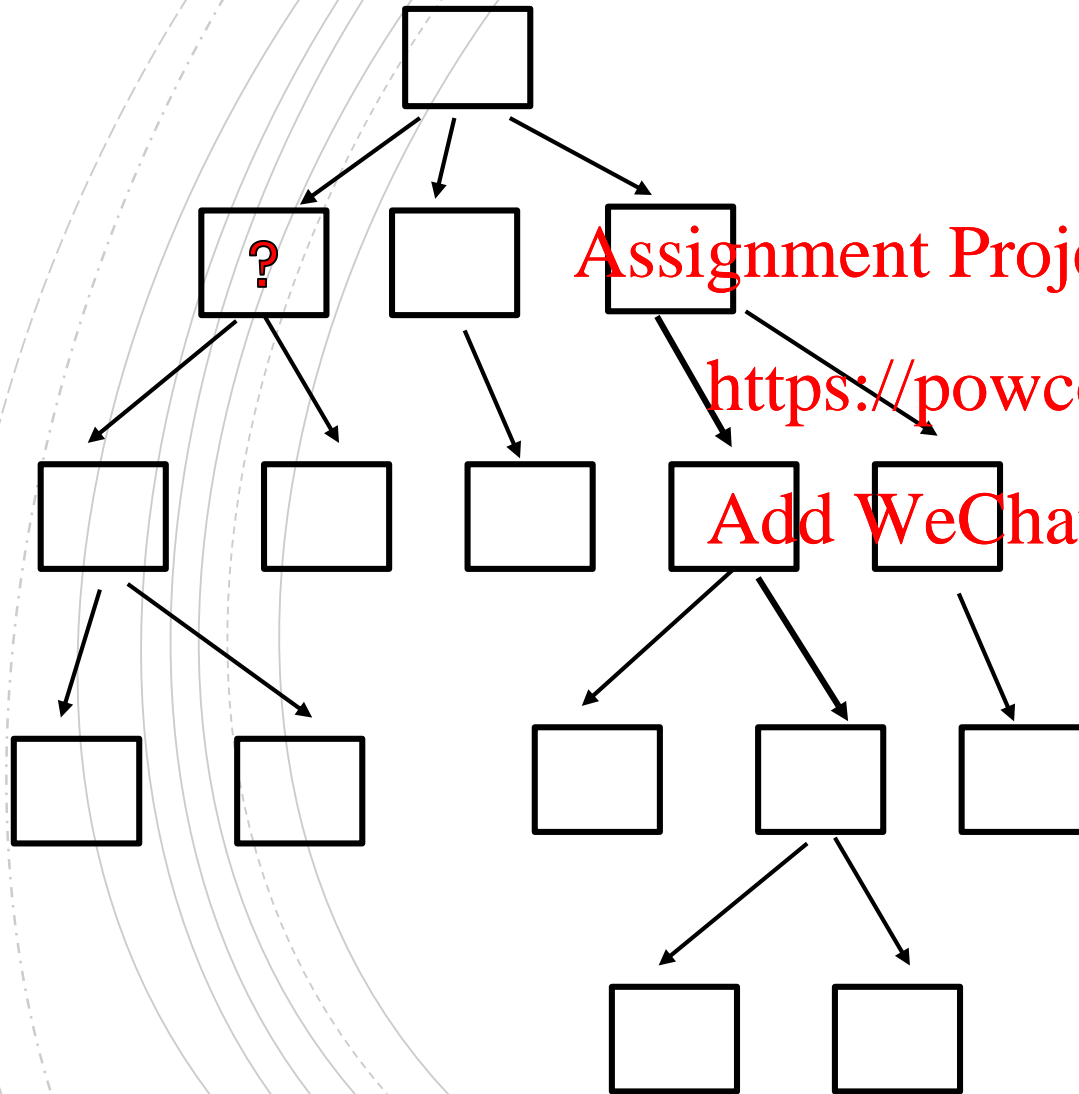

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

```
depth( v ) {  
    if( v.parent == null) //root  
        return 0  
    else  
        return 1 + depth( v.parent )  
}
```

(ROOTED) TREE TERMINOLOGY

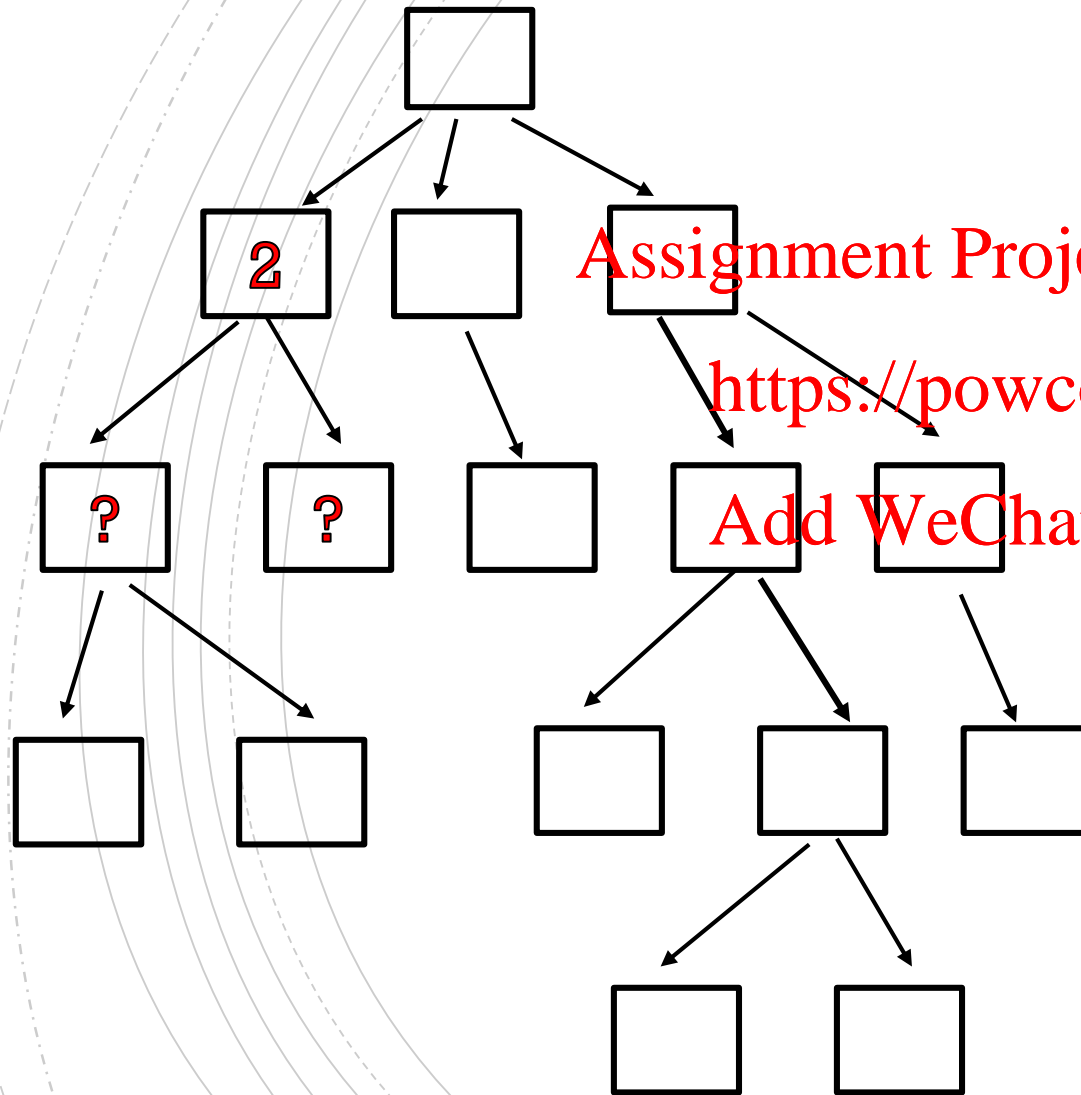

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

The *height* of a node is the maximum length of a path from that node to a leaf.

TREE TERMINOLOGY

Add WeChat powcoder

The *height* of a node is the maximum length of a path from that node to a leaf.

TREE TERMINOLOGY

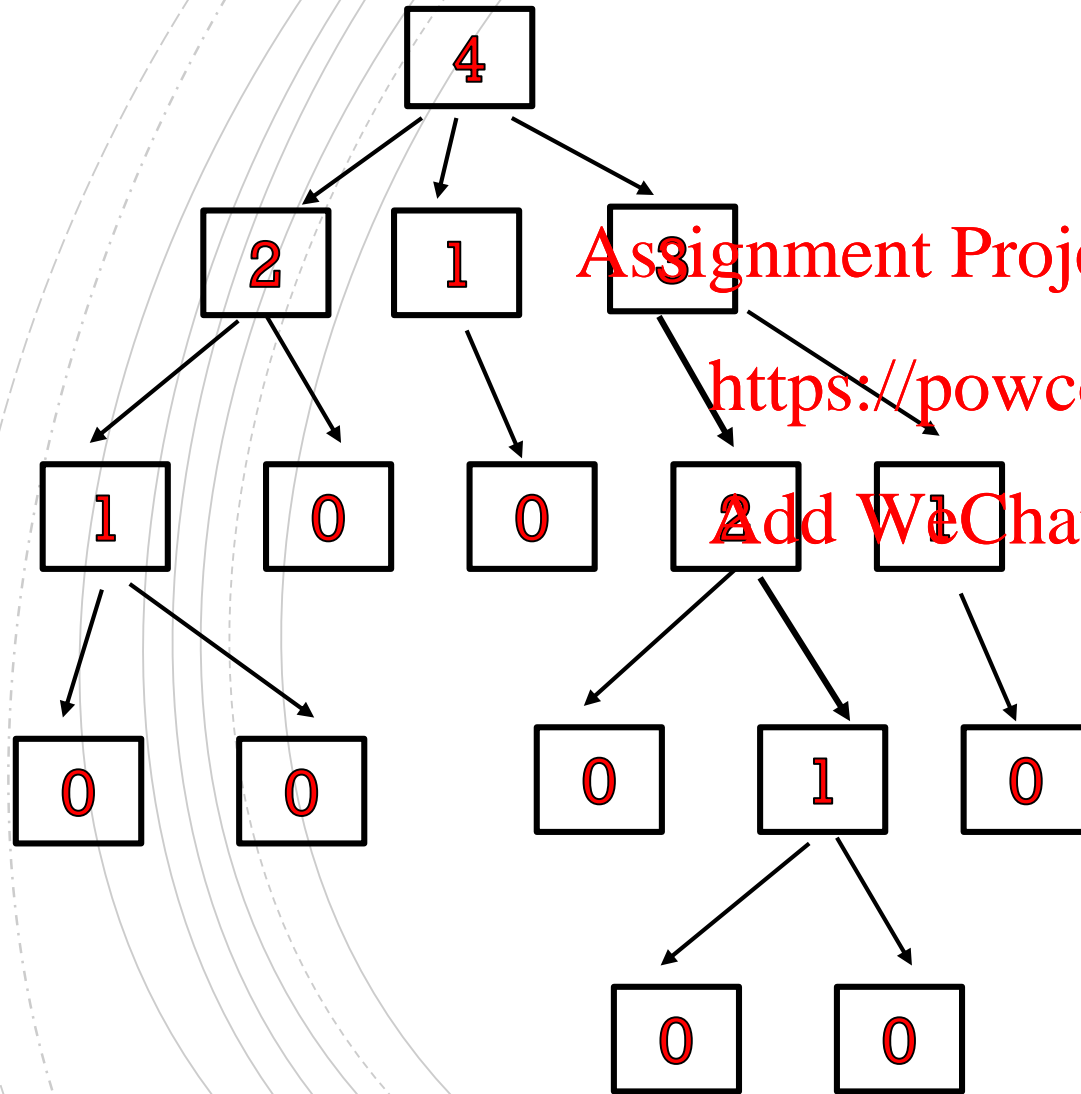

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

How can we compute the height of a node v ?

height(v)

Assignment Project Exam Help

~~<https://powcoder.com>~~

Add WeChat powcoder

```
height(v) {
    if (v is a leaf)
        return 0
    else {
        h = 0
        for each child w of v
            h = max(h, height(w))
        return 1 + h
    }
}
```

Assignment Project Exam Help
IMPLEMENTATIONS

<https://powcoder.com>

Add WeChat powcoder

HOW TO IMPLEMENT A TREE IN JAVA?

Same idea as with linked lists:

- Create a data type to represent tree nodes.
- Represent a tree with a pointer to the root node.

Assignment Project Exam Help

https://powcoder.com/

Add WeChat powcoder

class TreeNode<T> {
 T element;
 WeChat powcoder
}

HOW TO IMPLEMENT A TREE IN JAVA?

Same idea as with linked lists:

- Create a data type to represent tree nodes.
- Represent a tree with a pointer to the root node.

Assignment Project Exam Help
