Week 6-1: Quadratic Sorting a List

Add WeChat powcoder

Giulia Alberini, Fall 2020

# WHAT ARE WE GOING TO DO IN THIS VIDEO?

## ■ How to sort a list Assignment Project Exam Help

- Bubble sort
- Selection sort
- Insertion sort

<https://powcoder.com>

Add WeChat powcoder

# SORTING

- The process of arranging items in a ordered list following a given criterion.
- For example, sorting a list of integers in ascending order (from smallest to largest):

BEFORE

3
17
-5
-2
23
4

AFTER

-5
-2
3
4
17
23

# SORTING ALGORITHMS

There are many techniques for sorting a list

- Selection Sort
- Bubble Sort
- Insertion Sort
- Random Sort :P
- Heap Sort
- Merge Sort
- Quick Sort

Assignment Project Exam Help

## OBSERVATION

Today we are concerned with algorithms, not data structures.

Assignment Project Exam Help

<https://powcoder.com>

The following algorithms are independent of whether we use an array list or a linked list.

Add WeChat powcoder

Assignment Project Exam Help

# BUBBLE SORT

<https://powcoder.com>

Add WeChat powcoder

# BUBBLE SORT

---

- Bubble sort is the simplest sorting algorithm.

Assignment Project Exam Help

- Goal: order a list of integers in ascending order

Add WeChat powcoder

- IDEA: repeatedly iterate through the list and swap adjacent elements if they are in the wrong order.

## BUBBLE SORT – PSEUDOCODE

```
for i from 0 to list.length-1 {  
    for j from 0 to list.length -2 {  
        if(list[j] > list[j+1]) {  
            swap(list[j], list[j+1])  
        }  
    }  
}
```

<https://powcoder.com>

Iteration #1

- Compare all adjacent elements.
- If needed, swap!

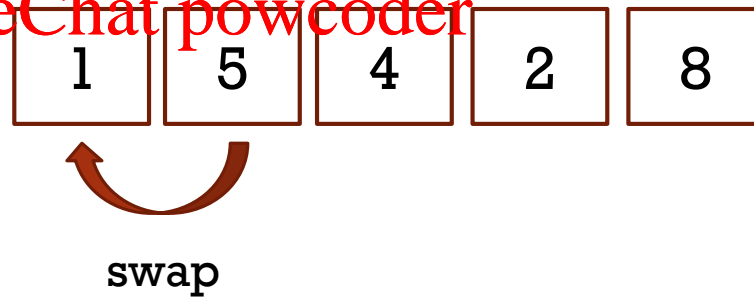

## EXAMPLE – ONE ITERATION

Assignment Project Exam Help

<https://powcoder.com>

Iteration #1

- Compare all adjacent elements.

- If needed, swap!

## WHAT CAN WE SAY AFTER THE FIRST ITERATION?

Q: Where is the largest element ?

Assignment Project Exam Help

A:

<https://powcoder.com>

Add WeChat powcoder

Q: Where is the smallest element?

A:

## WHAT CAN WE SAY AFTER THE FIRST ITERATION?

Q: Where is the largest element ?

Assignment Project Exam Help

A: It must be at the end of the list (position  $N-1$ )

Add WeChat powcoder

Q: Where is the smallest element?

A: Anywhere (except position  $N-1$ )

## WHAT CAN WE SAY AFTER THE FIRST ITERATION?

Q: Where is the largest element ?

Assignment Project Exam Help

A: It must be at the end of the list (position  $N-1$ )

Add WeChat powcoder

- Since each time we iterate through the list we ensure that the largest element is in the correct position. → at each iteration we can stop comparing adjacent elements one step earlier.

## BUBBLE SORT – PSEUDOCODE

```
for i from 0 to list.length-1 {  
    for j from 0 to list.length - i -2 {  
        if(list[j] > list[j+1]) {  
            swap(list[j], list[j+1])  
        }  
    }  
}
```

## EXAMPLE

Assignment Project Exam Help

<https://powcoder.com>

Unsorted

Sorted

We left off at the end of  
Iteration #1

Add WeChat powcoder

---	---	---	---	---

## EXAMPLE

Assignment Project Exam Help

<https://powcoder.com>

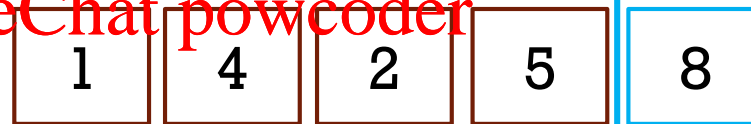

Unsorted

Sorted

Iteration #2

- Compare all adjacent elements up to index 3.

Add WeChat powcoder

- If needed, swap!

## EXAMPLE

### Assignment Project Exam Help

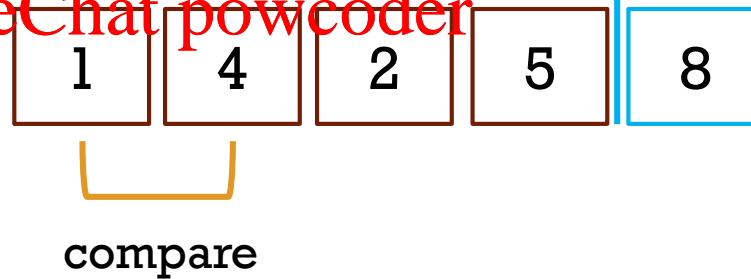

<https://powcoder.com>

Unsorted

Sorted

Iteration #2

- Compare all adjacent elements up to index 3.
- If needed, swap!

## EXAMPLE

Assignment Project Exam Help

<https://powcoder.com>

Iteration #2

- Compare all adjacent elements up to index 3.
- If needed, swap!

## EXAMPLE

Assignment Project Exam Help

<https://powcoder.com>

Unsorted

Sorted

Iteration #2

- Compare all adjacent elements up to index 3.
- If needed, swap!

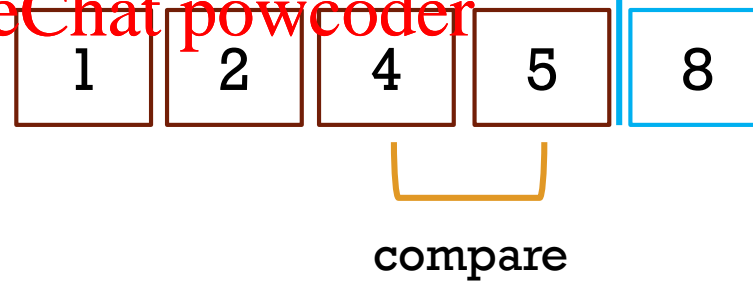

## EXAMPLE

Assignment Project Exam Help

<https://powcoder.com>

Iteration #2

- Compare all adjacent elements up to index 3.
- If needed, swap!

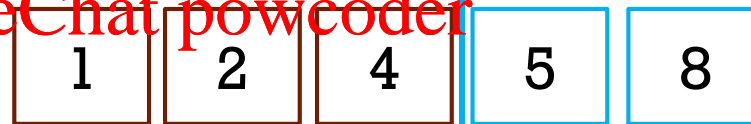

## EXAMPLE

### Assignment Project Exam Help

<https://powcoder.com>

Iteration #3

- Compare all adjacent elements up to index 2.
- If needed, swap!

Note: now the list is sorted, but the algorithm does not know that.  
When can the algorithm infer that the list is sorted?

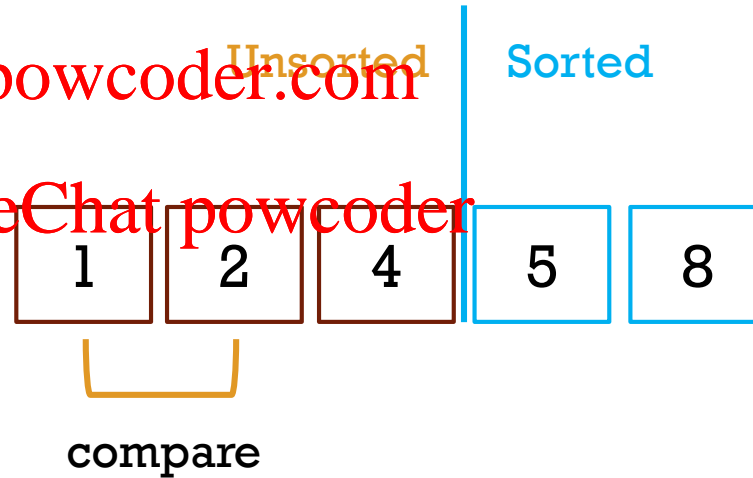

## EXAMPLE

### Assignment Project Exam Help

<https://powcoder.com>

Iteration #3

- Compare all adjacent elements up to index 2.
- If needed, swap!

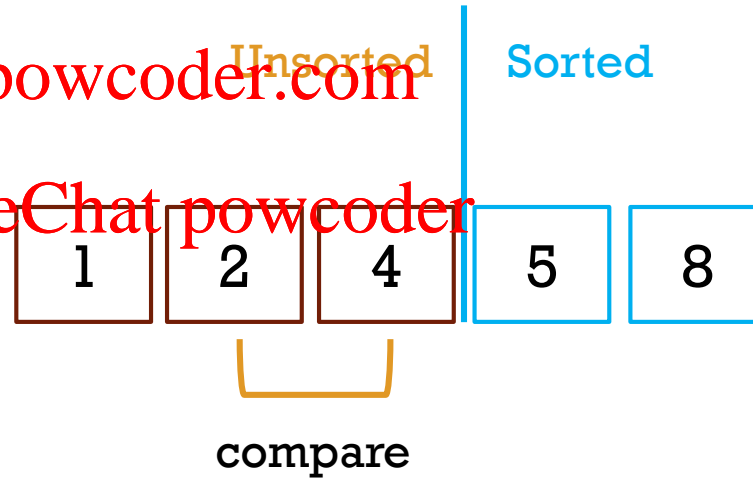

## EXAMPLE

### Assignment Project Exam Help

<https://powcoder.com>

Iteration #3

- Compare all adjacent elements up to index 2.
- If needed, swap!

No swap was needed in this iteration → the list is sorted!

## EXAMPLE

Assignment Project Exam Help

<https://powcoder.com>

No swap was needed in the last iteration. We can stop comparing. The list is sorted!

Add WeChat powcoder

## BUBBLE SORT – PSEUDOCODE

```
sorted = false
i = 0
while (!sorted) {
    sorted = true
    for j from 0 to list.length - i - 2 {
        if (list[j] > list[j+1]) {
            swap(list[j], list[j+1])
            sorted = false
        }
    }
    i++
}
```

SELECTION SORT

<https://powcoder.com>

Add WeChat powcoder

## SELECTION SORT

- Goal: order a list of integers in ascending order
- Idea: consider the list as if it was divided into two parts, one sorted and the other unsorted. (note: at the beginning the sorted part is empty)  
<https://powcoder.com>
- Procedure:  
[Add WeChat powcoder](#)
  - Select the smallest element in the unsorted part of the list
  - Swap that element with the element in the initial position of the unsorted array
  - Change where you divide the array from the sorted part to the unsorted part.

## SELECTION SORT – PSEUDOCODE

```
for delim from 0 to N-2 {
```

Repeat until list is all sorted (~N times)

```
    min = delim
```

```
    for i from delim+1 to N-1 {
```

```
        if (list[i] < list[min]) {
```

```
            min = i
```

```
        }
```

```
    }
```

```
    if (min != delim) {
```

```
        swap(list[min], list[delim])
```

```
    }
```

```
}
```

Find the index of the min element in the unsorted part of the list

Swap the min element in the first position of the unsorted part of the list.

## INSERTING

Mechanism is similar to inserting (adding) an element to an array list:

<https://powcoder.com>

Add WeChat powcoder

Shift all elements ahead by one position to make a hole, and then fill the hole.

# INSERTION SORT – PSEUDOCODE

```
for i from 0 to N-1 {
```

```
    element = list[i]  
    k = i  
    while (k > 0 && element < list[k-1]) {  
        list[k] = list[k-1]  
        k--  
    }
```

```
    list[k] = element
```

```
}
```

Repeat until list is all sorted (~N times)

Find where the element should be inserted in the sorted part of the list + make space for it (shift all the larger elements to the right)

Insert the element in the sorted part of the list.

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

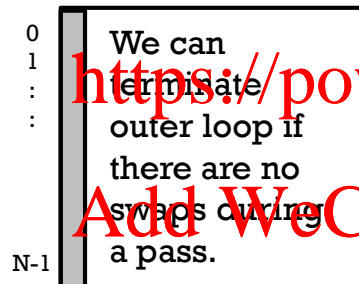

# COMPARISON OF THE THREE ALGORITHMS

Performance depends highly on initial data. Also, it depends on implementation (array vs. linked list), e.g. what is cost of swap and 'shift'.

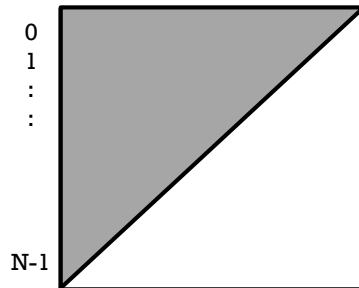

## Bubblesort

```
while(!sorted)
  for j from 0 to N - 2 - i
```
