Week 9-2: Recursion 1

Giulia Alberini, Fall 2020

# WHAT ARE WE GOING TO DO IN THIS VIDEO?

- Recursive algorithms Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

## EXAMPLE

```
public static void countdown(int n) {  
    if (n == 0) {  
        System.out.print("Go!");  
    } else {  
        System.out.print(n + " ");  
        countdown(n-1);  
    }  
}
```

- What prints if we call `countdown(3)`?

➤ 3 2 1 Go!

## EXAMPLE – EXECUTION

```
public static void countdown(int n) {  
    if (n == 0) {  
        System.out.print("Go!");  
    } else {  
        System.out.print(n + " ");  
        countdown(n-1);  
    }  
}
```

Execution of `countdown(3)`.

- The execution of `countdown` starts with `n==3`. Since it is not 0, 3 is printed and `countdown` is called with input 2.
- The execution of `countdown` starts with `n==2`. It is not 0, thus 2 is printed and `countdown` is called with input 1.
- ❖ The execution of `countdown` starts with `n==1`. Since it is not 0, 1 is printed and `countdown` is called with input 0.
- The execution of `countdown` starts with `n==0`. Since `n` is 0, `Go!` is printed and the execution ends.
- ❖ The execution of `countdown(1)` ends.
- The execution of `countdown(2)` ends.
- The execution of `countdown(3)` ends and we are back in `main`.

## RECURSIVE – DEFINITION

Recursive functions/methods consists of the following

<https://powcoder.com>

- **Base Case(s)**: one (or a finite number) of terminating scenario that does not use recursion to produce an answer.
- **Recursive or Inductive step(s)**: rules that determine how to produce an answer from simpler cases.

## BASE CASE

Note that if there is no base case in a recursive method, or if the base case is never reached, the execution will never end.

<https://powcoder.com>

**Add WeChat powcoder**

```
public static void forever (int n) {  
    forever(n) ;  
}
```

## COMING UP

---

Several examples of algorithms that can be implemented recursively:

- Factorial function
- Fibonacci numbers
- reverseList
- sortList
- towerOfHanoi

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

## EXAMPLE 1 – FACTORIAL

The factorial of a number is defined as follows:

$$0! = 1$$

$$1! = 1$$

$$2! = 1 * 2 = 2$$

$$3! = 3 * 2 * 1 = 6$$

...

$$n! = n * (n - 1) * (n - 2) * (n - 3) * ... * 1$$

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

## FACTORIAL: RECURSIVE DEFINITION

- Notice that:

$$\begin{aligned} n! &= n * (n-1) * (n-2) * (n-3) * \dots * 1 \\ &= n * (n-1)! \end{aligned}$$

- Thus, the following definition completely determines the factorial:

*Base case:*  $0! = 1$

*Recursive step:*  $n! = n * (n-1)!$

## FACTORIAL (ITERATIVE)

Assignment Project Exam Help

```
public static int factorial (int n) {  
    int result = 1;  
    for(int i=2; i<=n; i++) {  
        result = result * i;  
    }  
    return result;  
}
```

<https://powcoder.com>

Add WeChat powcoder

## FACTORIAL (RECURSIVE)

Let's use its recursive definition to write a method that computes the factorial function:

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

```
public static int factorial (int n) {  
    if (n == 0) {  
        return 1;  
    }  
    return n * factorial(n-1);  
}
```

Base case

Induction step

## FACTORIAL: AN EXAMPLE

- What happens when the method call `factorial(4)` is executed?

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

```
public static int factorial (int n) {  
    if (n == 0) {  
        return 1;  
    }  
    return n * factorial(n-1);  
}
```

## CORRECTNESS

**Claim:** the recursive `factorial(n)` algorithm returns  $n!$ .

**Proof** (by mathematical induction):

- **Base case:** `factorial(0)` returns 1.

- **Induction step:**

- **IH:** Assume `factorial(k)` returns  $k!$  when  $k \geq 1$

- **To prove:** `factorial(k+1)` returns  $(k+1)!$

`factorial(k+1)` returns  $\text{factorial}(k) * (k+1)$   
 $= k! * (k+1)$ , by IH  
 $= (k+1)!$

<https://powcoder.com>

Add WeChat powcoder

## EXAMPLE 2 – FIBONACCI NUMBERS

- Fibonacci sequence: 1, 1, 2, 3, 5, 8, 13, 21, 34, 55, 89, 144, ...

Assignment Project Exam Help

- Base cases:

$$f_1 = 1$$

$$f_2 = 1$$

- Recursive/Inductive Step:

$$f_n = f_{n-1} + f_{n-2}$$

## FIBONACCI (ITERATIVE)

```
public static int fibonacci(int n) {  
    if(n==0 || n==1) {  
        return 1;  
    }  
    fib0 = 1;  
    fib1 = 1;  
    for(int i=2; i<=n; i++) {  
        fib2 = fib0 + fib1;  
        fib0 = fib1;  
        fib1 = fib2;  
    }  
    return fib2;  
}
```

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

## FIBONACCI (RECURSIVE)

```
public static int fibonacci (int n) {  
    if (n==0 || n==1) {  
        return 1;  
    }  
    return fibonacci(n-1)+fibonacci(n-2);  
}
```

**This is much simpler to express than the iterative version.**

## CORRECTNESS

Claim: the recursive Fibonacci algorithm is correct.

Assignment Project Exam Help

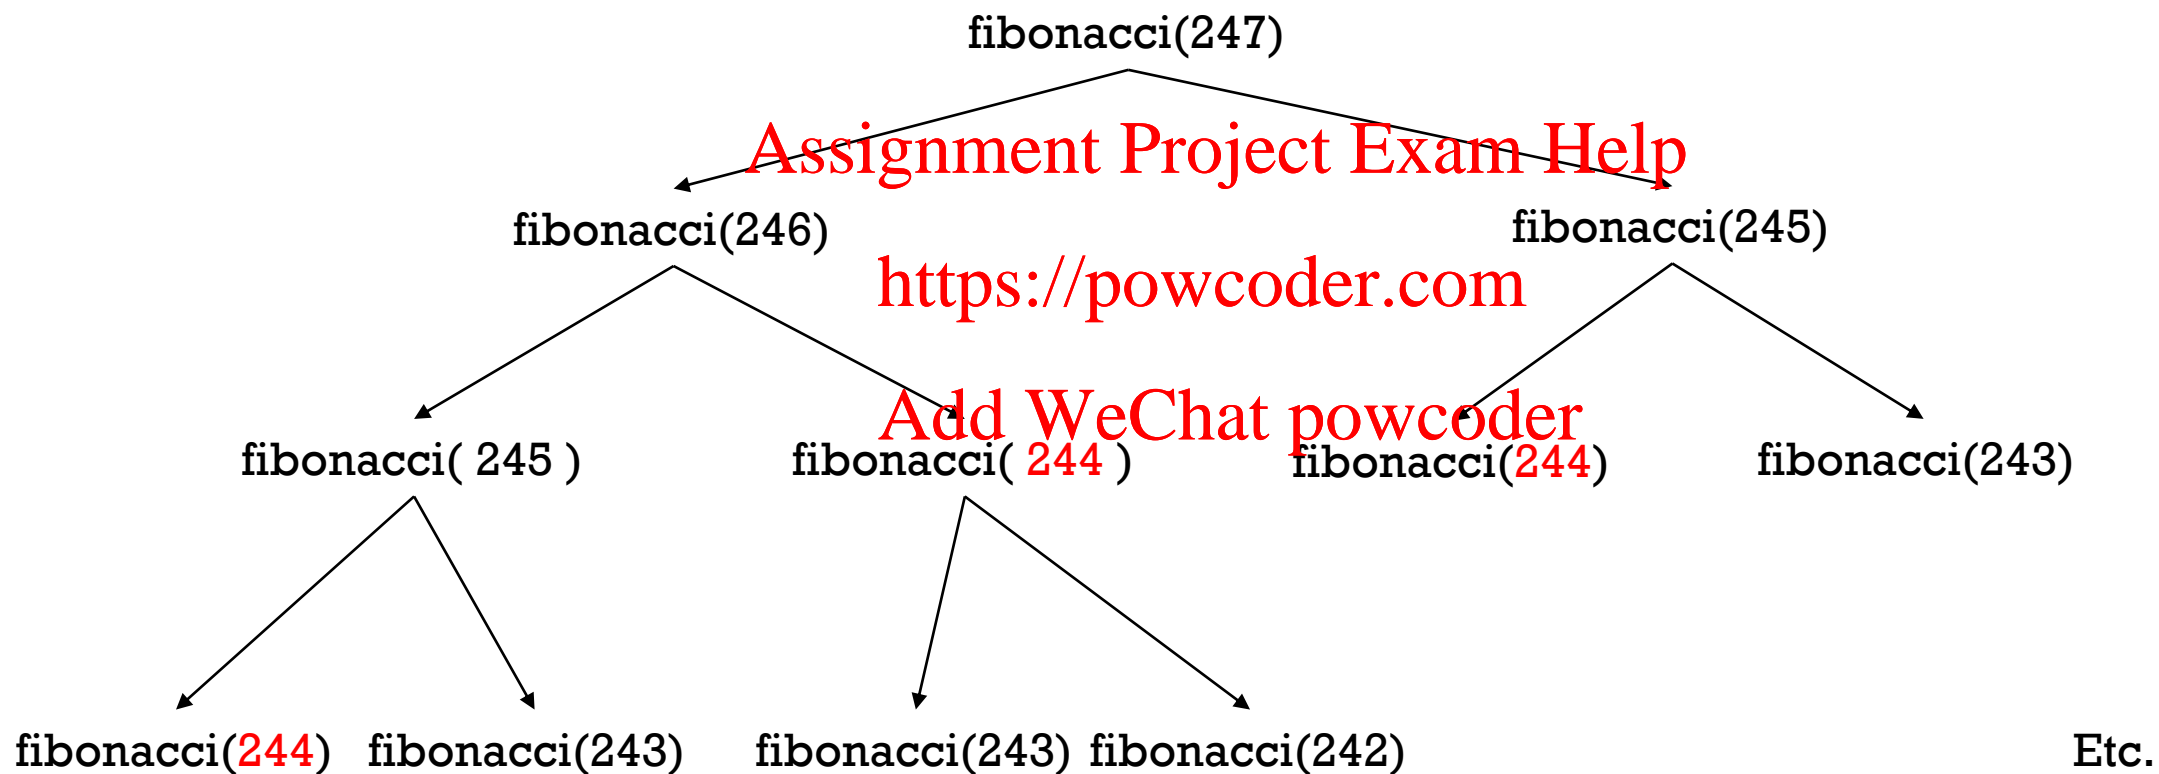

Proof(sketch): (by strong mathematical induction)

<https://powcoder.com>

- Induction step:

- IH: Let  $k \geq 0$ , Assume ~~fibonacci(i)~~ returns  $f_i$  for every  $0 \leq i < k$
- To prove: fibonacci(k) returns  $f_k$

However, the recursive Fibonacci algorithm is very inefficient. It computes the same quantity many times, for example:

## EXAMPLE 3: REVERSING A LIST

input

$\{a, b, c, d, e, f, g, h\}$

Assignment Project Exam Help

output

$\{h, g, f, e, d, c, b, a\}$

<https://powcoder.com>

Add WeChat powcoder

## EXAMPLE 3: REVERSING A LIST

input

$\{a, b, c, d, e, f, g, h\}$

Assignment Project Exam Help

output

$\{h, g, f, e, d, c, b, a\}$

Idea of recursion:

Add WeChat powcoder

$a \quad \{b, c, d, e, f, g, h\}$

$\{h, g, f, e, d, c, b\} \quad a$

## REVERSING A LIST (RECURSIVE)

```
public static void reverse(List list) {  
    if(list.size()==1) {  
        return;  
    }  
    firstElement = list.remove(0); // remove first element  
    reverse(list); // now the list has n-1 elements  
    list.add(firstElement); // appends at the end of the list  
}
```

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

## EXAMPLE 4 – SORTING A LIST (RECURSIVE)

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

```
public static void sort(List list) {  
    if(list.size()==1){  
        return;  
    }  
    minElement = removeMinElement(list);  
    sort(list); // now the list has n-1 elements  
    list.add(0, minElement); // insert at the beginning of list  
}
```

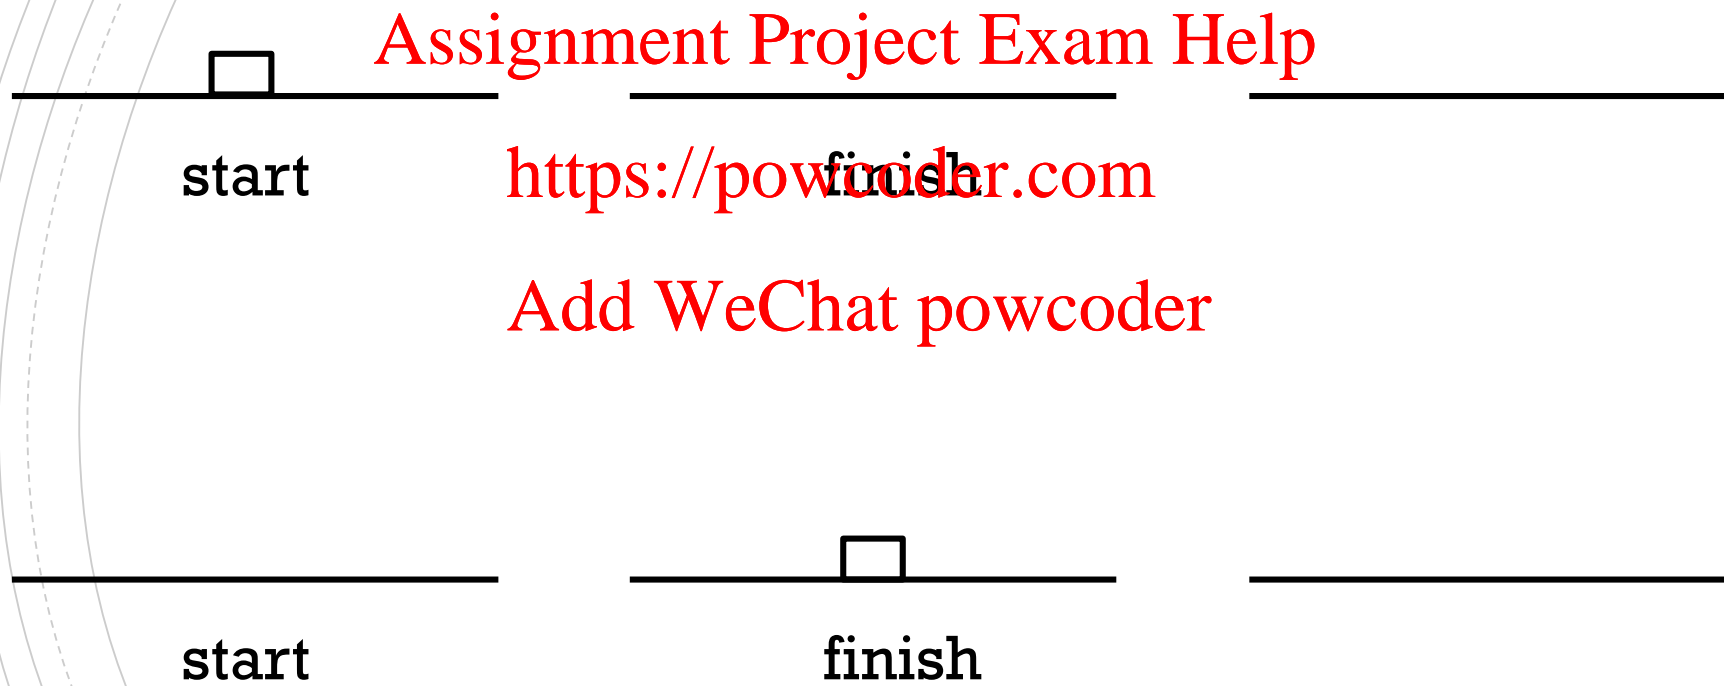

## EXAMPLE 5 – TOWER OF HANOI

**Problem:** Move  $n$  disks from start tower to finish tower such that:

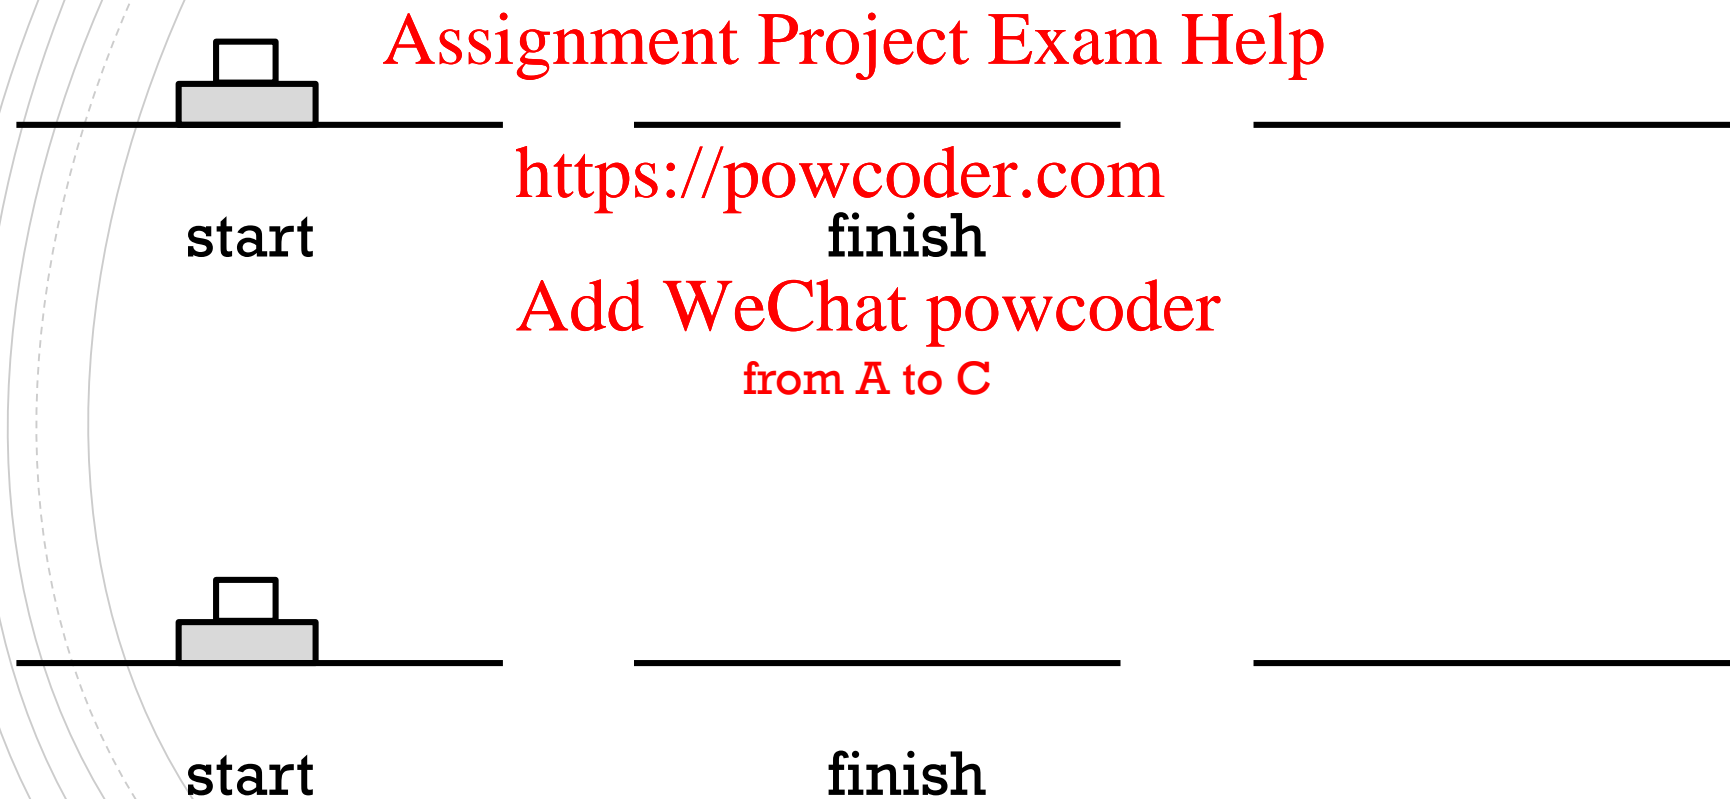

- move one disk at a time
- you can have a smaller disk on top of bigger disk (but you can't have a bigger disk onto a smaller disk)

## EXAMPLE - n=1

## EXAMPLE - $n=2$

## EXAMPLE

*tower(4,A,C,B)*

Assignment Project Exam Help

*tower(1,A,B,C)* <https://powcoder.com>

Add WeChat powcoder

*tower(4,C,B,A)*

## CORRECTNESS

**Claim:** the `tower()` algorithm is correct, namely it moves the blocks from start to finish without breaking the two rules (one at a time, and can't put bigger one onto smaller one).

Assignment Project Exam Help

**Proof: (sketch)**

<https://powcoder.com>

- **Base case:** `tower(1, *, *, *)` is correct
- **Induction step:**
  - for any  $k > 1$ , assume `tower(k, *, *, *)` is correct
  - **Prove** `tower(k+1, *, *, *)` is correct.

Add WeChat powcoder

## HOW MANY MOVES?

`tower(1, start, finish, other )`

Assignment Project Exam Help

move from

start to finish

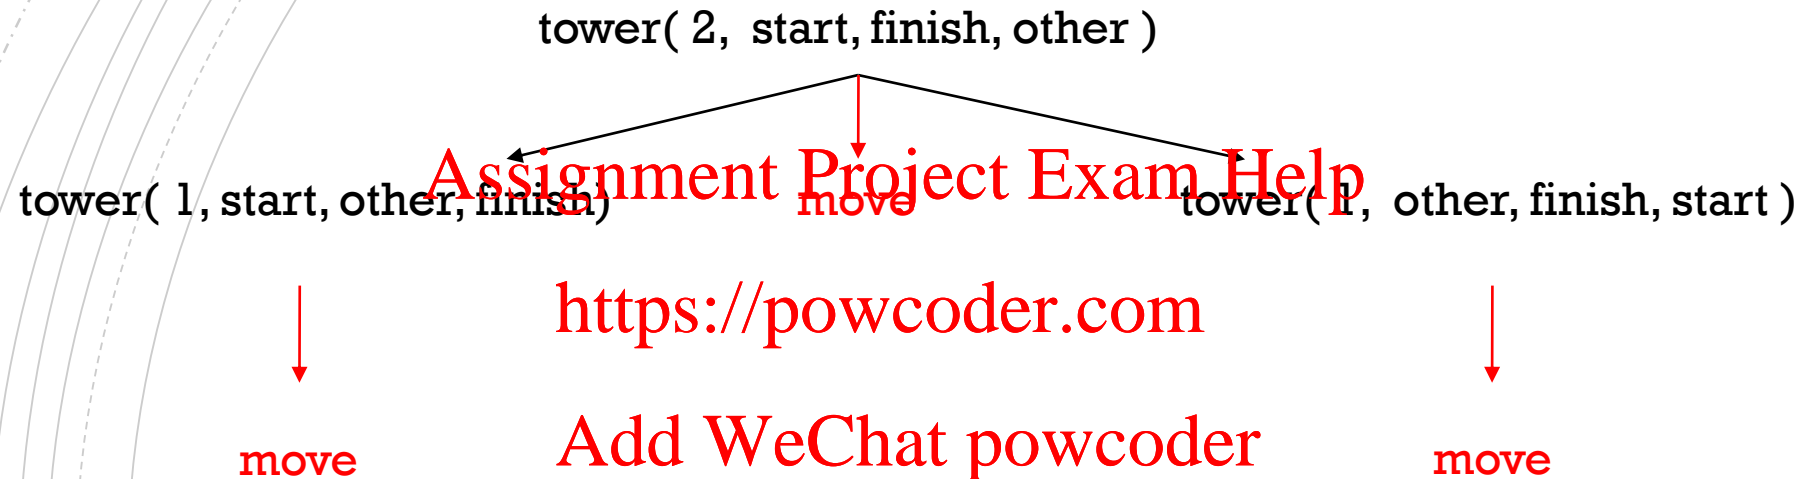

<https://powcoder.com>

Add WeChat powcoder

Answer: 1

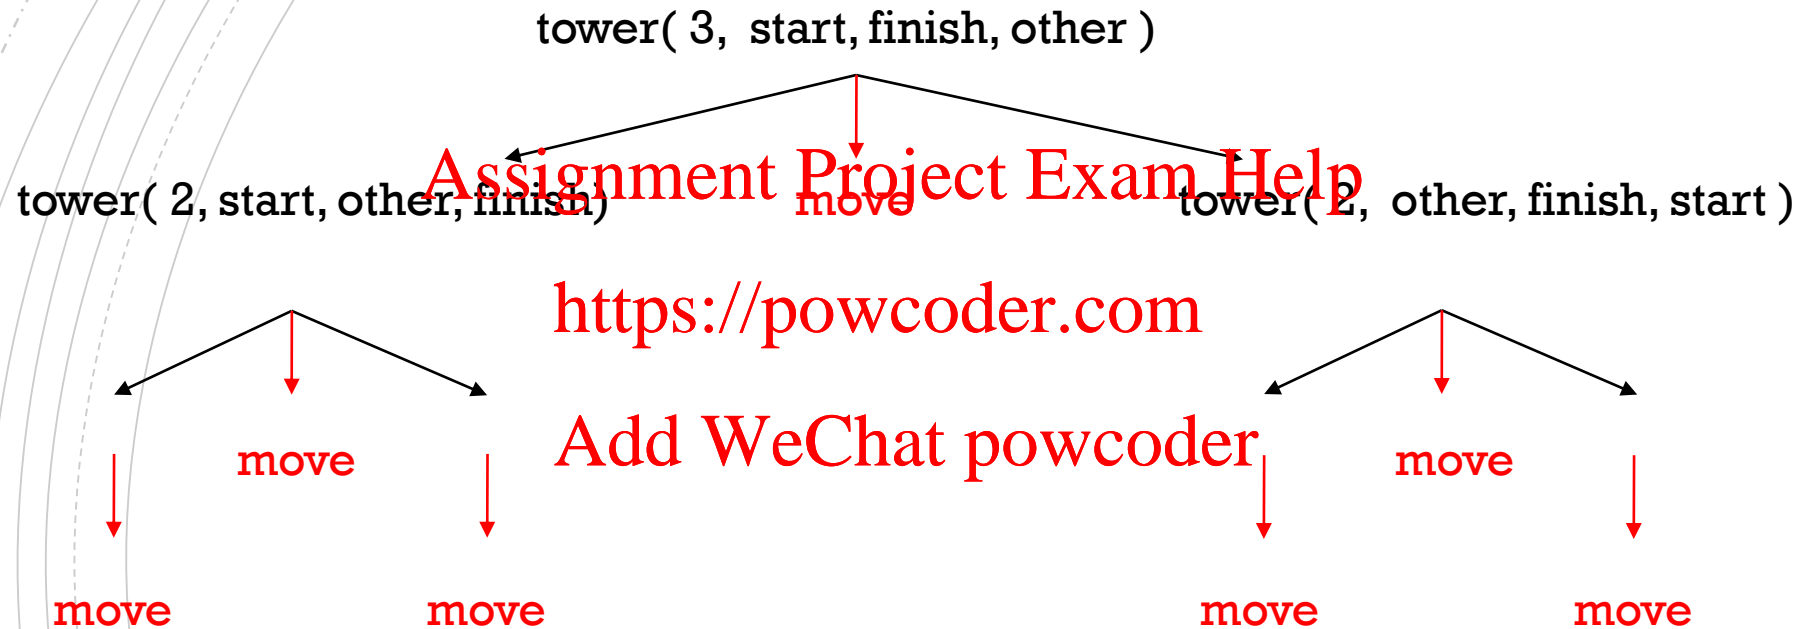

## HOW MANY MOVES?

Answer: 1 + 2

## HOW MANY MOVES?

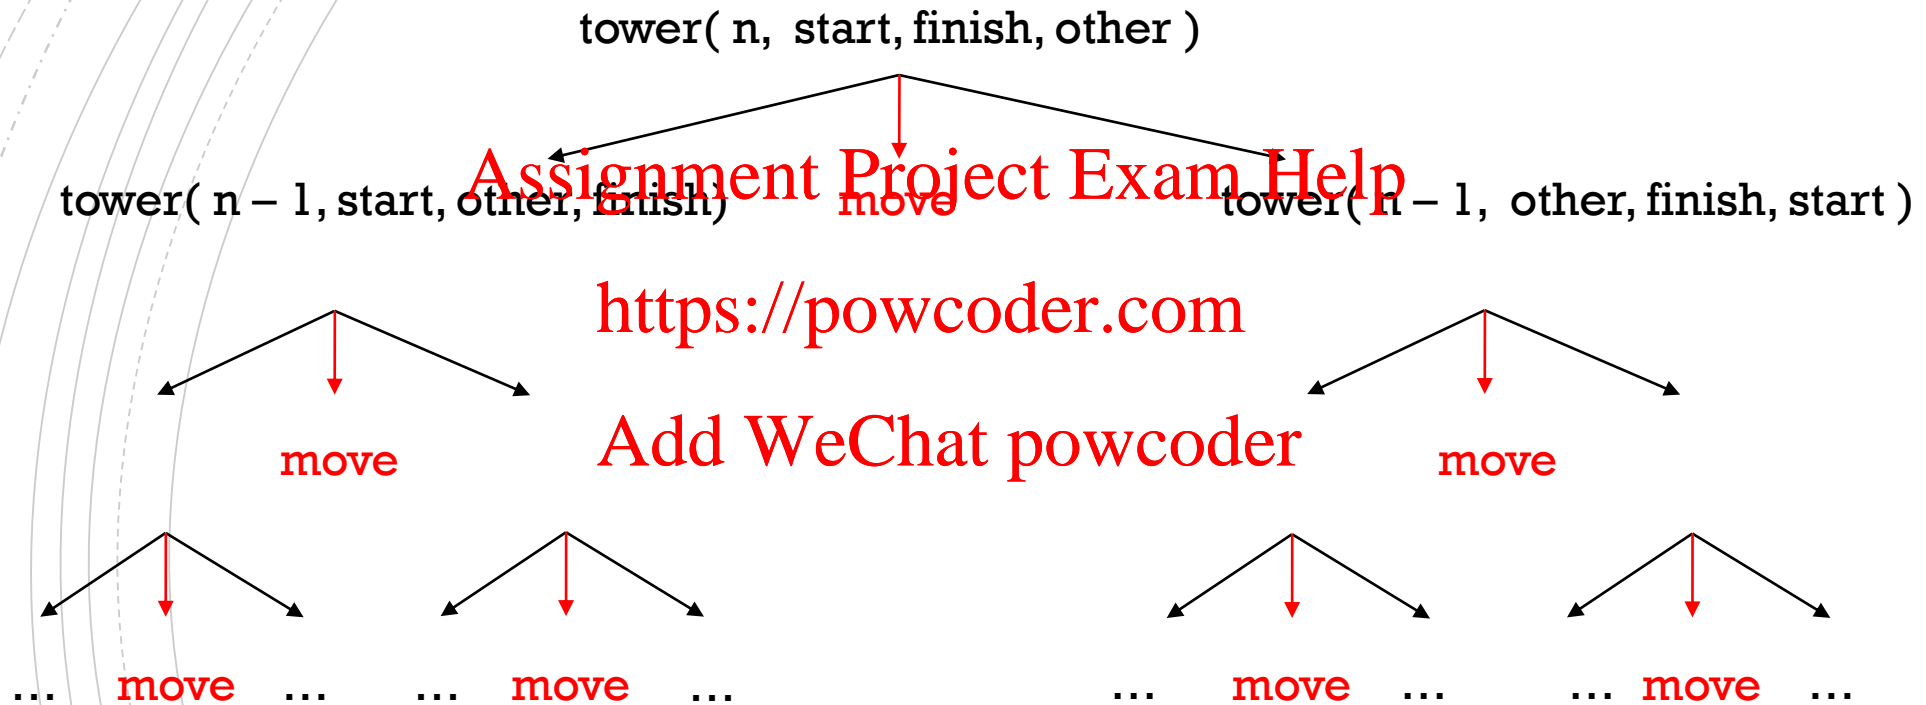

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

**Answer:**  $1 + 2 + 4 = 2^0 + 2^1 + 2^2$

## HOW MANY MOVES?

**Answer:**  $1 + 2 + 4 + \dots + 2^{n-1} = 2^n - 1$

# RECURSION AND ITERATION

## Assignment Project Exam Help

- Recursion and iteration (loops) are equally expressive.

<https://powcoder.com>

- Anything recursion can do, iteration can do

Add WeChat powcoder

- Anything iteration can do, recursion can do

# RECURSION VS ITERATION

- Which one to use?
  - Use the one is easier to think in terms of, for a specific problem.
  - For simple cases, iteration is usually easier and faster.
  - For complex cases, recursion is often more elegant and simpler to code.
  - It is important to remember that when using one or the other, this decision might impact the performance of your program.

# RECURSIVE DATA STRUCTURE

## Assignment Project Exam Help

- We can recursively defined also data structures.

<https://powcoder.com>

- Let's consider arrays and let's think how we can recursively defined a list of items.

Add WeChat: powcoder

# LINKEDLIST

- **LinkedList<E> class :**

```
private E val;
```

```
private LinkedList<E> next;
```
